HGJM

Clare HGJM relays have established new industry standards for quiet, fast and stable operation. HGJM Series SPDT relays have the 100VA load and multi-billion operation reliability characteristic of our HGSM and are recommended for all new applications.

Response times approach 1ms speeds, noise levels are less than 5μV at 5ms after coil energization (10kHz bandwidth) and the relays are ultra-stable to 250Hz. The 1 Form C contact will switch μV, nanoampere loads to 2A or 500V loads (100VA max, ac or dc). The relays are offered in 0.400″ height high sensitivity models and 0.350″ height low profile versions. Both mount on staggered 0.100″ PCB grid patterns. The low profile models permit 0.5″ board centers.

HGJ2MT

Clare HGJ2MT relays feature the same outstanding electrical characteristics as the HGJM relays in a DPDT (2 Form C) package. High sensitivity HGJ2MT relays have common open time durations to 50μs at 100Hz for capacitor transfer technique applications. Electrostatic shielding is standard on all models.

HGQM

Clare HGQM relays for PCB mounting have the fastest response times in the industry for mercury-wetted relays. The contact form is a SPDT transfer-contact configuration. Typical response times range from 0.8 to 1.0ms and noise levels are under 5μV within 1.5ms after coil energization (1000Hz bandwidth). HGQM relays are ultra-stable at switching speeds to 500Hz (bistable) and 400Hz (single-side-stable). Switching capabilities range from signal levels to 1A or 500V loads (50VA max).

The HGQM package is only 0.580″ high and mounts on convenient staggered 0.100″ grid patterns. An ideal companion for HGJM relays in many applications requiring low level sensor-based analog signal switching or process control for data logging/acquisition.

HGQ2MT

The HGQ2MT relays feature the same electrical characteristics as the HGQM relay with transfer contact switching but in a DPDT package. This ultra-high speed two pole relay is ideal for low level switching applications.

Contact noise is less than 10μV within 2ms after coil energization — three times faster than the industry standard. Thermal emf levels are 15μV maximum.

HG2M

HGSM

Clare HGSM relays are PCB mount models with 2A or 500V (100VA max.) switching capabilities. The HGSM series SPDT relay is recommended for replacement applications only. New applications should specify the faster HGJM series with the same load switching capabilities, life expectancy and lower noise. The HGSM package is 5/8" high and mounts on staggered 0.100" grid patterns.

HGS2MT

Clare HGS2MT relays have the same ratings and life expectancy as the HGSM series in a DPDT model. The HGS2MT relay is also recommended for replacement purposes only. HGJ2MT relays are recommended for all new applications requiring 100VA (per pole) switching capabilities in DPDT configurations.

HGM

HGM relays are Clare standard HG switch capsules in module form, are provided with plated steel covers for excellent mechanical protection and magnetic shielding. The standard HG switch in the HGM is not polarity sensitive. Contacts are SPDT make-before-break rated at 5 amps, 500 Volts, 250VA maximum. Life expectancy is 22 x 10^9 at specified ratings.

HG2M

HG2M has the same characteristics as the HGM but contains 2 capsules to give you double-pole, double-throw configuration make-before-break. This results in saving space and cost over single element units. Contacts are rated at 5 amps 500 Volts, 100VA maximum with life expectancy of 22 x 10^9.

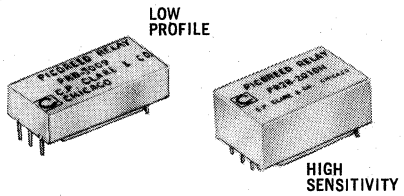
PRB & PRBH SERIES PICOREED®



Clare's micro-miniature PRB and PRBH series Picoreed relays offer signal level to 10VA switching characteristics, power requirements ranging from 48 to 500 milliwatts (dependent on relay configuration) and operate times typically less than 500 microseconds in economical space saving packages. The low profile PRB series permits 0.375″ PCB mounting centers and the high sensitivity PRBH series will mount on 0.5″ PCB centers.

The 5 volt PRB/PRBH relays are fully compatible with the standard 5 volt DTL/TTL logic families and will solve many interface application problems.

Both series have molded epoxy bases with stamped metal covers and mount on 0.70″ x 0.100″ grid patterns. The PRB low profile models are also available in 6 Form A, 1B, 1A1B and 1A latching contact configurations. Electrostatic shielding is available.

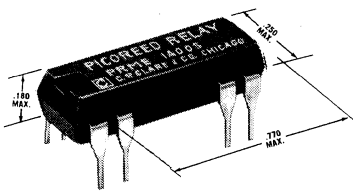
PRME SERIES PICOREED®



Clare's new dual-in-line package PRME Picoreed relay represents a significant addition to the micro-miniature Picoreed relay family packaging. The relays feature 600 microsecond typical response times, signal level to 10VA switching capabilities, total input/output isolation, epoxy molded construction and an IC compatible TO-116 DIP package. Traditional Clare reliability gives 100 x 10^6 operations at signal level loads or 5 x 10^6 operations at the rated load.

The PRME one Form A switching arrangement is compatible with most DTL/TTL drive IC's. The coil draws only 13 milliamperes from standard 5 volt logic supplies. Low contact noise and low thermal emf characteristics make the PRME ideal for electronic process control equipment and low level switching applications.

The 0.180″ height optimizes the industry trend toward high density packaging by allowing PRME mounting on 0.375″ PCB centers compatible with IC components. The PRME adapts to either automatic insertion equipment techniques for direct PCB mounting on 0.30″ x 0.100″ grid patterns or to mounting in standard 14 pin DIP sockets.

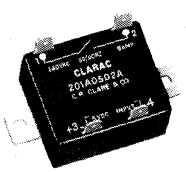
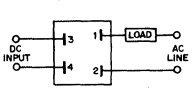
CLARAC™ AC POWER RELAYS





WIRING DIAGRAM

The Clarac relay is an ultra-reliable hybrid relay featuring a reed input and a triac solid state output. The relays are very sensitive and operate with less than 200mW power inputs. Rugged construction, low cost and long life make the Clarac an excellent choice for tough circuit applications such as switching solenoids, ac motors, lamps and other industrial loads.

The units maximum ratings are 4, 8, 10 or 15A at 240Vac, 50/60Hz when mounted on a 8″ x 8″ x 1/8″ aluminum heat sink for optimum operation. The relays must be derated when used without heat sink (free air) or at elevated temperatures (consult Clare Data Sheet 222 for surge current capabilities and additional details). The relays have dust and explosion proof nylon covers, quick-connect terminals and an average shipping weight of 2 oz.

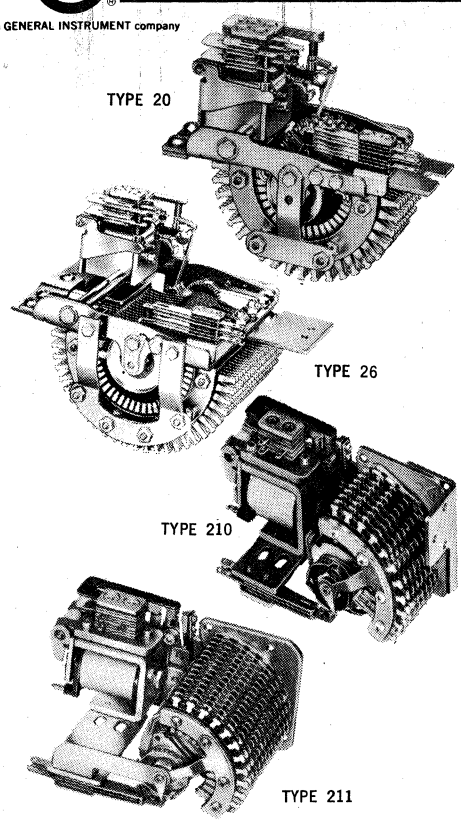
STEPPING SWITCHES



Clare stepping switches offer an economical alternative to solid state switching. Multiplexing, counting and sequencing problems are easily solved by providing the most working capacity in the smallest space. Clare stepping switches allow you to select, interrupt or change connections in a succession of circuits in response to current pulses.

Type 210 offers 3, 6 & 12 levels of 10 points with a life expectancy of 100 million steps at 12 levels. Contacts are rated 0.1A at 115Vac or 30Vdc resistive with a 3A carry rating. Operate time is approx. 20ms at 25°C and release time is 10ms. Solder lug terminals are standard.

Type 211 has the same electrical characteristics as the type 210 but in 3, 6, & 12 levels of 11 points.

Type 20 offers 4 & 8 levels of 20 points with a life expectancy of 180 million steps at 8 levels. Contacts are rated 0.1A at 115Vac or 30Vdc resistive with a 3A carry rating. Operate time is approx. 20ms at 25°C and release time is approx. 10ms at 25°C. Solder lug terminals are standard.

Type 26 has the same electrical characteristics as the type 20 but is offered in 4 & 8 levels of 26 points or 6 levels of 52 points.

ALL SWITCHES LISTED HAVE 1 BRIDGING LEVEL WITH THE REMAINING LEVELS BEING NON-BRIDGING. 2C OFF-NORMAL AND 2C INTERRUPTER CONTACTS ARE STANDARD.

REED RELAYS

Computer Components Inc. HP Series of dry reed and mercury wetted relays offers the design engineer miniature, low profile, plug-in devices, with magnetically shielded coils.

Fast switching speeds and low power consumption make them applicable to control and instrumentation, low level switching, counting, high speed sampling, computers and associated peripheral equipment.

In addition to the company's standard dry reed and mercury wetted designs, CCI also produces exact replacements for IBM plug-in reed relays. (See Equivalency Chart on back page of catalog for specifications and cross reference part numbers.) Write or phone for catalog.

The Coto Series 1000 Miniature PCB Reed Relays offer the most comprehensive choice of switching parameters with pin terminations on the popular grid pattern of 1" x .015". Included are 21 contact combinations of Form A, B and C dry reeds and 11 combinations of Form A and B in mercury wetted types. The latter offer greatly expanded switching capability, and eliminate all contact bounce. Up to 6 poles per relay and 5 standard coil voltages are optional. In addition, special purpose reed switches, windings and terminal pin options, electrostatic and magnetic shielding may be specified.

Drive coil windings have been carefully optomized to assure fast contact transfer. This is particularly important in relays carrying several reeds, since the first to close shunts out a disproportionate percent of flux unless adequate overdrive is available. Typical pull-in and drop-out is 1 mil/sec. and .5 mil/sec. respectively, including bounce and coil rise and fall time. Hg wetted reeds are somewhat slower, averaging 2 mil/sec. and 1 mil/sec. Operate times are exclusive of any delay introduced by contact protection devices. Reactive or high inrush loads will require contact protection, as with any type relay if maximum reliability and life are to be realized.

For information on contact protection request Technical Bulletin No. CS-1. For engineering assistance address Sales Engineering Dept. and include full details.

OVER VOLT-UNDER VOLT MONITOR/RELAY • UO SERIES

The **UO SERIES** consists of a solid state voltage detector that senses a voltage greater than a pre-set "pick-up" voltage and causes an internal DPDT relay to operate. When the voltage drops to the pre-set level, the output relay will de-energize. A hysteresis is set into each unit to allow a differential between pick-up and drop-out. **UO SERIES,** adjustable, close differential relays also available. Both A.C. and D.C. units available.

3 PHASE VOLTAGE BAND MONITOR/RELAY • PB SERIES

The **PB SERIES** offers protection to three phase equipment which is required to operate between two voltage limits. The three phases are monitored for a preselected under or over limit. An internal control relay is de-energized when the voltage goes outside of these limits. This device provides both under and over voltage monitoring of each phase of a Delta or Y system in one package. The monitors are equipped with a drop out time delay to accommodate start-up transients. With normal operating voltages on all phases, an internal relay will be energized. If the voltage on any phase goes above or below the drop-out limit, the signal to the time delay will be removed. If this out-of-limit condition exists on any phase, for a period longer than the release time or the time delay, the output relay will de-energize. **PB SERIES** is offered in A.C. only.

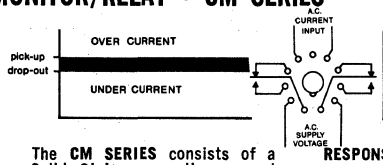
2. CURRENT MONITORS

CURRENT MONITOR/RELAY • CM SERIES



The **CM SERIES** consists of a Solid State, magnetic, current detector which senses a current level. When the monitored current exceeds the trip point setting for a period greater than the response time, an internal 10 amp. DPDT relay will operate. A current decrease of at least 5% of trip point is required for relay to de-energize. The monitors are equipped with appropriate time delays to accommodate start-up transients and short-time line variations.

3. PHASE MONITORS

PHASE SEQUENCE, PHASE LOSS & UNDER VOLTAGE MONITOR/RELAY • SL SERIES - 3φ

The **SL SERIES** is designed for use in applications where motor rotation or connection to the power line is critical, or where loss of one or more phases will cause damage to electrical equipment. 5. NEW PRODUCTS (Inquire About Our Other Products Briefly Described Below)

A. MOTOR MONITOR. Monitors several motors in a multiple motor installation. Will remove all motors from the line when a single phasing or low voltage condition occurs. When proper conditions are restored, all motors re-start in sequence. (Time delay between each motor start.)

B. CRANK CYCLE TIMER. Used to crank engines of stand-by M-G sets when primary power is lost and then restored.

C. ANTI-SHORT CYCLE TIMER. Prevents damage to air conditioning compressors by not allowing them to re-start for 5 minutes if there is a momentary power or thermostat interruption.

D. SOLID STATE CURRENT OVERLOADS. Features faster response than thermal overload approach. Used to detect an over current or under current conditions.

E. RELAY SOCKETS. Are now available in stock to accommodate all applicable products herein.

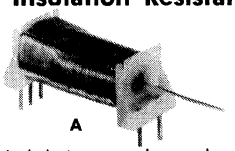
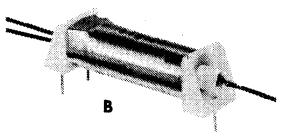
Special Designs

Douglas Randall has developed a wide variety of custom relays to meet special requirements. A few designs are shown below to illustrate this capability. Special molding techniques have been perfected which make it possible to manufacture any size, shape or terminal arrangement with very low tooling cost. Rapid engineering and prototype service is available for special applications.

High Insulation Resistance Relays





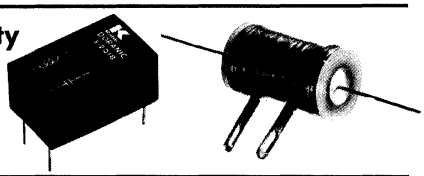
Two typical designs are shown above:
A — A miniature reed relay with a floating lead to maintain high IR.
B — This is a relay using Form A and Form B switches timed to provide a Form C (break before make) function with flying leads to maintain 10^{13} ohms. Up to 5 Form A contacts.

High Temperature Relays

Use of Class H insulation throughout and design of the coil to provide good contact pressure over a wide temperature range make this relay suitable for 180°C operation.

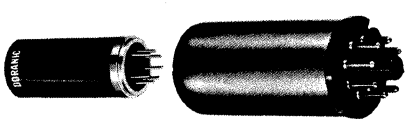
High Sensitivity Relays

The relays shown will operate at 10 MW coil power.

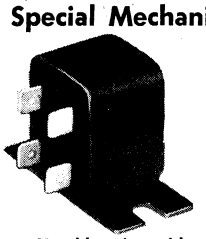


Plug-in Relays

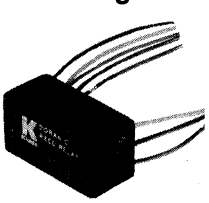
Reed relays are easily adapted to standard style headers for socket mounting.



Special Mechanical Arrangements



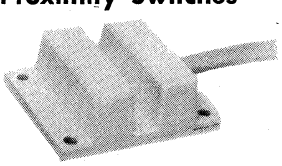
Metal housing with spade terminals.



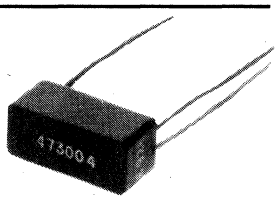
Lead wire termination.

Vertical mounting for mercury wgt.

Proximity Switches

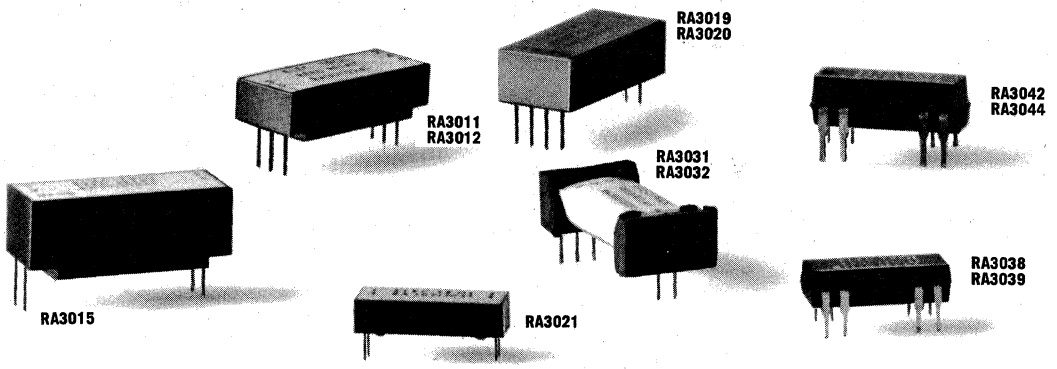


This is a vane operated switch and magnet assembly in an aluminum housing. Switches rated from dry circuit to 100 watts are available.



Epoxy molded switch and magnet assemblies are available in many sizes, contact ratings and terminal arrangements.

ELEC-TROL REED RELAYS



ORDERING INFORMATION

To order any ELEC-TROL reed relay, a ten digit part number can be developed to describe the desired relay from the model number and the numbers shown in the shaded columns on the data sheets.

The relay part number is developed as shown at right:

RAXXXX X XX X
Model Number
Number of Poles
Operating Volts
Contact Rating Symbol Number

ELEC-TROL reed relays supply the answer to advanced switching problems providing fast switching time, compact size, high reliability, long life, low power operation at low cost. Simplicity of design, coupled with 100% inspection and attention devoted to minute details of production enable ELEC-TROL to supply reed relays of superior performance. To be sure that reed switches used in ELEC-TROL reed relays are of the finest quality and provide the highest contact reliability, a stringent test program is applied to each production lot of reed contacts prior to their incorporation in relays. The lot of reed contacts is accepted on the basis of a successful life test performed on a sample taken from the lot. Each reed contact is then 100% tested for contact resistance and sensitivity. ELEC-TROL, INC. has complete design, production and testing facilities for fabrication of reed relays in a new modern plant located in Saugus, California near Los Angeles. Total application services are available to assist in optimum and economical application of these devices in your system.

The RBM Type 93 relays are used in vending machines, heating, air conditioning, business machines, control panels, appliances, data processing equipment, office machines, communications systems and instruments.

The coil bobbin and contact terminal block are molded plastic and is resistant to arc tracking. The contact terminal allows - (a) easy insertion and removal of connectors, (b) stresses caused by wiring hook-up cannot change relay adjustment. The contact springs are molded as an integral assembly and gives excellent stability in all environmental conditions. The armature contact springs are connected to the terminals by flexible insulated leads welded to the terminals. Connections for the contacts and coil are located on the front of the relay.

Solder terminal type has combined front, single hole screw and stud mounting. Printed*circuit type may be controlled by SCR if firing angle is no more than 10 degrees.

The plug-in relay has high impact case and standard pin connections.

Quick connect type designed for front mounting or polarized socket mounting. Use 93-153-1 socket kit. Relay has .20 x .187 terminals. UL & CSA recognized under Component Recognition Program: Hardware included in boxed units only.

The MS64 Miniature Sensitive Relay is specifically designed for electronic applications where printed circuit termination and enclosed construction are of major importance. It has symmetrical configuration providing for minimum mounting space requirements and maximum protection to moving parts. A snap-on cover provides protection against contaminants and prevents damage to moving parts when handling. Mounting bracket versions of the relay are for conventional chassis mounting and "solder on" lead wire terminations.

The MS64 5 Amp. Relay utilizes ⅛" (.125") diameter Silver Alloy Contacts. The Button Contacts are rated 5 Amps. non-inductive @ 28 V.D.C. - 115 V.A.C. Electrical Life is 100,000 operations at rated load. The MS64 2 Amp. Relay utilizes Gold Alloy Cross-Bar Contacts, which are excellent for Switching low level or dry circuit loads.

SOLID STATE TIMERS

This time delay module may be connected directly to integrated circuit or transistor logic circuits. It is compatible with all logic families in use today. It can supply up to 100 mA of output current, enough to drive many types of relays directly, including all Flight Systems static relays.

Delay time is resistor programmable over a 10 to 1 range on all models. The output may be inhibited or reset at any point in a timing cycle, and may be recycled almost immediately (up to 98% duty cycle). These all solid state timers will withstand severe shock, vibration and humidity and may be mounted in any position. Timing accuracy and repeatability is excellent over a wide voltage and temperature range.

HERMETICALLY SEALED RELAYS

Unmatched for reliability, the light weight, thermal capabilities, and high resistance to shock of these hermetically sealed relays make them ideally suited for military and industrial electronic applications.
The reliability factor stems from exacting assembly (in a "White Room" where necessary), rigid quality control, well-equipped lab facilities and precise testing procedures. These manufacturing techniques, combined with GE's advanced engineering design, produce top-quality relays with dependable characteristics exceeding those of static switching devices.

Contact resistance is held to a minimum by silver contacts (with gold flash) combined with high contact forces.
All high-temperature components allow the operation of these relays in ambient temperatures between −65°C to +125°C.
Units are available with studs or brackets for mounting. The micro line has tab brackets for printed-circuit board application. Headers can be furnished with solder hooks, three-inch leads, plug-in (with socket availability information) and many special terminals. *Write for Bulletin GEA-6628*

REEDAC™ RELAYS

Reedacs™ are hybrid or solid-state relays employing triacs. Most utilize our exclusive "bug" circuitry that prevents premature failure of reed-switch or transistor input caused by a previously unknown electrical characteristic of the triac. For complete information on Reedacs, write or call Grigsby-Barton; or contact your Grigsby-Barton representative.

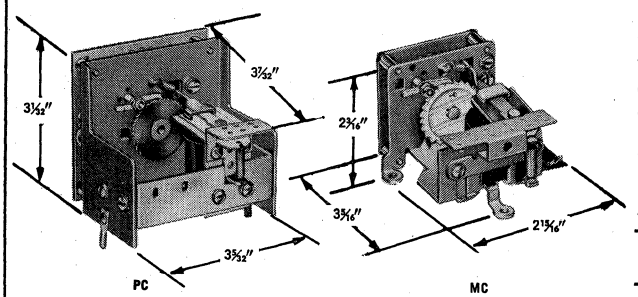
GUARDIAN® ELECTRIC STEPPERS

STEPPING CONTROLS

For accurate sequence selecting, pulse multiplying, pulse dividing, circuit selecting, automatic homing, remote homing, counting and latching. Guardian steppers are specified for automatic control of electrically operated business machines, accumulators (coin and other), animated displays, electrical scoreboards, automatic overhead garage doors, assembly line controls, automatic packaging (loading) controls, sump pump controls, commercial slide projectors, among others. All Guardian steppers except Series 705 are intermittent duty. All are direct-drive units with switching operations completed upon energization.



CONTINUOUS ROTATION

The circuit selection wiper on Continuous Rotation Steppers moves in one direction only, upon energization of the step coil. This type of stepper is available in standard 24 point (MC) or 40 point (PC). The Guardian MC Midget Continuous Rotation Stepper is particularly adaptable to repetitive sequence functions. The 24 bridging contact deck is evenly divisible by eight possible sequences. The PC stepper features self-stepping speeds up to 30 steps per second and mechanical life expectancy of over 4,000,000 steps.

ELECTRICAL RESET

Type MER. A direct drive (steps on energization) with positive mechanical reset interlock actuated by the reset magnet and unlocked on the first energization of the step magnet. Assures positive reset on as short a pulse as one-hundredth of a second. By interconnecting two or more Steppers, count can be increased to any desired total counting by tens, or any convenient multiple. Will control a sequence of operation and then automatically reset to starting position. The circuit selecting wiper on Electrical Reset Steppers can be reset to zero or home from any desired position, by energization of the reset magnet. They are frequently employed to record counts by various numerical groups, then resetting automatically.

Type PER. Operation same as MER but with up to 48 active contacts.

ADD AND SUBTRACT

Add and subtract steppers are basically continuous rotation types with the added feature of being able to reverse the movement of the selecting wiper when required.

Type MAS. A midget add and subtract stepper incorporating a cam actuated switch which operates at zero position. Used primarily to indicate a zero balance between pulses supplied to the "add" coil as compared to pulses received by the "subtract" coil.

Type PAS. New Bi-directional steppers whereby the selector wiper moves either direction depending on which of the coils is energized. Supplied with .058" dia. AMP quick-connect terminals arranged in circle on deck, and also includes a form "C" cam switch.

NOTES: All stepper contact points are rated 1½ amps resistive, at 120 V., 60 Hz Coil* Voltages are 120 AC, 60 Hz and 24 DC.
* Steppers will operate satisfactorily at 15% below or 10% above rated voltage.

ENCLOSED PLUG-IN AC RELAY WITH BUILT-IN NEON LAMP TO INDICATE CIRCUIT FAULTS — 10 AMPERE

This plug-in relay utilizes a miniature neon lamp connected across coil terminals. The lamp lights each time the coil is energized, or indicates a circuit fault when lamp is "dark". Ideal for detecting circuit faults in relay banks, mass arrangements, or where relays are visibly located at intermediate switching points of the circuitry. Precludes the use of circuit testers. Available with 8 pin octal plug for DPDT and 11 pin for 3PDT. Contacts rated 10 amps at 120VAC 60 Hz, non-inductive load. Shipping weight, 3.5 oz.

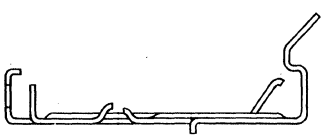
SERIES 1220 AC — 1225 DC



"Above Chassis" Snap Bracket accurately positions relay for quick connects or soldering.

Modern design of this relay has become the standard of the industry. Series 1220 and 1225 are reduced in height and cost by eliminating the radio-type plug and all the wiring between the relay and the plug. These series use the terminal panel itself as the male plug. **Famous "UNI-GUARD" continuous-loop moving** blades eliminate soldered connections. Cover snap-locks in place with a flush fit that guards against shorting. Universal terminals **function as solder-lug, .110" quick connect,** or socket plug-in. Mounting bracket for above chassis installation included with each relay. Contacts will safely switch 10 amperes at 120VAC non-inductive in most applications and are U/L approved at 7 amperes.

SERIES 1220M AC - 1225M DC

MANUAL RESET RELAY

Basic size and cost advantages of the Series 1220 AC and 1225 DC are obtainable off-the-shelf in a manual reset version. Height and cost are reduced through the elimination of the radio-type octal plug and the wiring between the relay and the plug. Unit is built to meet U/L requirements and features the "UNI-GUARD" continuous-loop moving blades. Double pole double throw contacts transfer when coil is energized, locking in the transferred position without further coil energy. Lock is released and contacts re-transfer **only** when manual reset button is pressed.

BDT SERIES TIME DELAY

A Time Delay with unusual features which include operation on high or low line, replaceable electro-mechanical relay, repeatability, temperature stability and small size. The Time Delay incorporates all silicon transistor circuits that operate over a wide input range of 75-125 VAC, 50-60 Hz and draw only 5 mA prior to time out. 24VDC units also available. Enclosed in a standard relay housing, terminated with an octal plug (8 pin), they are available with time delay periods from 1-10 to 10-60 seconds, adjustable. BDT Time Delays operate in the most severe industrial applications. The solid state circuit is immune to most transient noise found on commercial power lines. Voltage up to 2500 volts peak (short duration) can be tolerated. In the area of machine control, where large numbers of control cycles are expected, the BDT offers another advantage, ability to replace the internal relay. The solid state timing control has the minimum capability of 5 x 10^7 operations under normal conditions with 5 amp DPDT relay output.

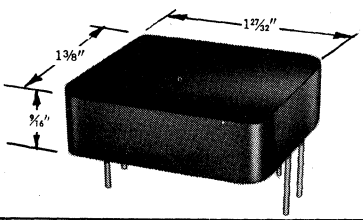
SERIES 6505 ELECTRONIC "ZERO CROSSOVER" SWITCHES



A low cost module that assures true "zero crossover" switching by forming an electrical "cushion" between signal input and load power. Solid state output switching circuit isolated from input signal through a long-life reed relay. Load is normally de-energized when "load power" is applied. Application of signal input causes load to become energized. Crossover: 0.0VAC ±10 V. Load Power: 120VAC. (240VAC available on special order.) Contact Combination: SPST-NO. Contact Ratings: 1.0 amp @ 120VAC, 56/60 Hz. Operating Temperature: −20° to +55°C. Minimum Operations: 10^7. Termination: Printed Circuit .047" x dia. .375" pins.

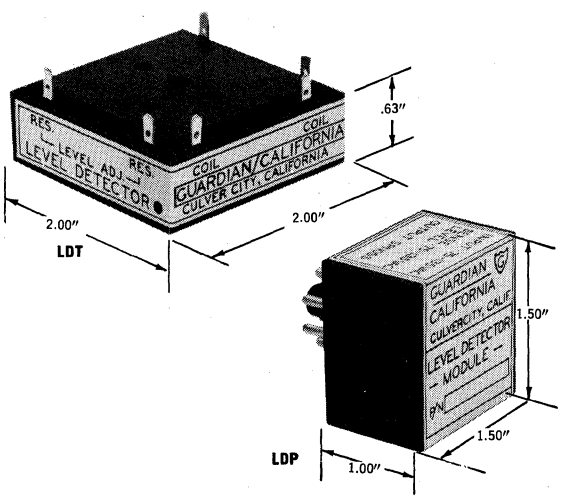
LEVEL DETECTORS



Inexpensive Voltage Level Detector with unusual operating characteristics. These molded modules incorporate circuits comprised of silicon semiconductor devices to form a peak detecting voltage differential amplifier, signal amplifier and a solid state output switch suitable for driving a number of Guardian relays. The unit's sense level is adjustable (either fixed or variable) over ranges of 85-135VAC, 50-60 Hz, 20-30VAC, 50-60 Hz, 20-30VDC, 180-250VAC, 50-60 Hz by external resistance. This broad adjustment range permits operation as either an under or over level detector. Two units may be used to form band pass or pedestal level sensing. When used with Guardian Series 6900-6905 timing modules, they provide inexpensive time delayed voltage detection systems that allow them to ignore normal line fluctuations. Transient suppressed, they will withstand 2500 V peak (short duration) without damage or malfunction. On DC units, transient protection is 600 volts.

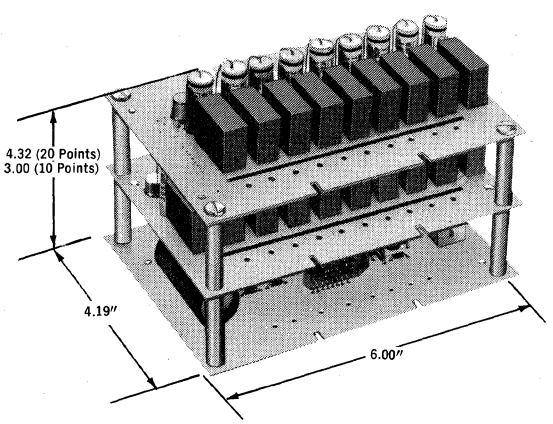
SLS SOLID STATE LOGIC STEPPER



The SLS 100 Series Solid State Steppers are the only power solid state steppers to accept either high level or logic level inputs with high noise immunity for industrial applications. The output of each step is a 120VAC 2½ amp switch. They are modularly constructed so that many configurations can be accomplished from stacked modules. Standard "off the shelf" models have ten or twenty steps. Units may be obtained with pulsers to make them self-stepping steppers. They can be cascaded or paralleled to perform complex switching and control functions. These versatile Guardian Steppers are built for operation on input power of 120VAC, 50-60 Hz or 400 Hz and 24VDC. All solid state construction offers the advantages of mechanical noise free operation and, under proper operating conditions, practically unlimited life.

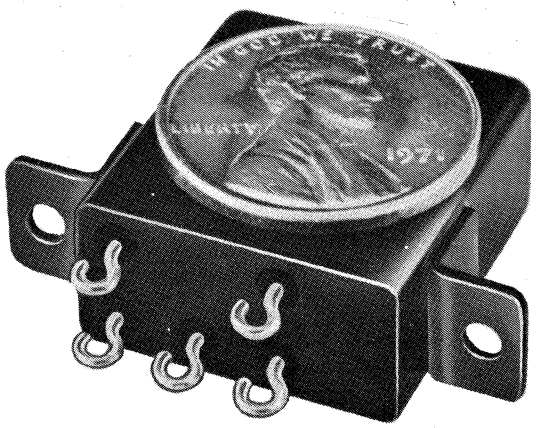
SERIES **1800**
SERIES **1900**



FEATURES

The 1800 and 1900 Series are all Solid-State Timers that offer excellent reliability over a useful life well in excess of one million operations. They have a fast reset time, are remarkably stable over a wide temperature range, and can provide delays down to the millisecond range.

Each unit is hermetically sealed and encapsulated with a standard crystal-can header which results in an extremely rugged, high performance assembly. All units are available in a choice of standard mounting configurations. The 1860 version is directly interchangeable with a crystal can relay.

FIXED TIME DELAY

MINIATURE TIMING MODULE

SERIES **2400**

FEATURES

The Series 2400 Time Delay Relay combines a solid-state timing circuit and a Hi-G relay in a package only slightly longer than a standard crystal-case housing. This combination provides the current-carrying capacity and the environmental immunity of Hi-G's electromechanical relays with the long life and quick response of electronic circuits.

Delays from 50 milliseconds up to 120 seconds can be specified for this rugged DC timing module. The solid-state circuit has a voltage regulator circuit that permits the use of unregulated power sources.

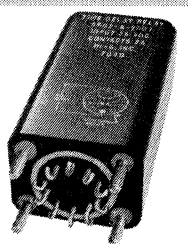
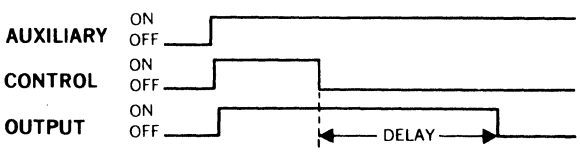
DELAY ON RELEASE TIMING MODULE

SERIES 5600
SERIES 5700



TIMING DIAGRAM — Delay-On-Release



FEATURES

- **All semiconductors are silicon devices**
- **PC board construction, completely encapsulated**
- **Hermetically sealed**

FUNCTION

Apply auxiliary power. Upon application of control power, the output will energize. Remove control power to initiate delay period.

OPERATION

The delay period is initiated by removing voltage from the control pin. The output de-energizes to mark the conclusion of the delay period. Electronic circuitry requires that auxiliary power be applied at all times.

Offered in a variety of enclosures, contact configurations and ratings, the fixed delay series is designated 5600 and the adjustable delay is series 5700.

Delay-on-release is often referred to as Delay-on-break, Delay-on-dropout or Delay-on-de-energization. The output logic remains the same, only the terms change.

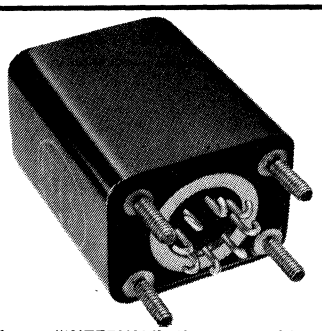
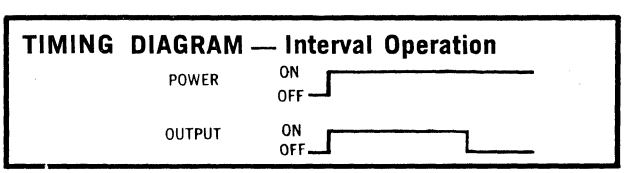
INTERVAL TIMER

SERIES 4600
SERIES 4700
SERIES 4800



TIMING DIAGRAM — Interval Operation



The function of an "INTERVAL" timer, provides a defined time period. This time period or pulse is considered to be the conducting state of a solid state timing module or the energized state when utilizing an electromechanical relay for output.

The Hi-G approach uses precise circuit designs in compact simplicity to meet the need for a sound balance between reliability and economy. Standard devices include both solid state and electromechanical output configurations. The series 4800 represents the solid state timing module. For electromechanical relay output the 4600 series offers fixed delay times while the 4700 is an adjustable version.

FUNCTION

Apply power and the output will energize immediately. After time out, the output will revert to De-Energized State. Remove and Re-apply power to Recycle.

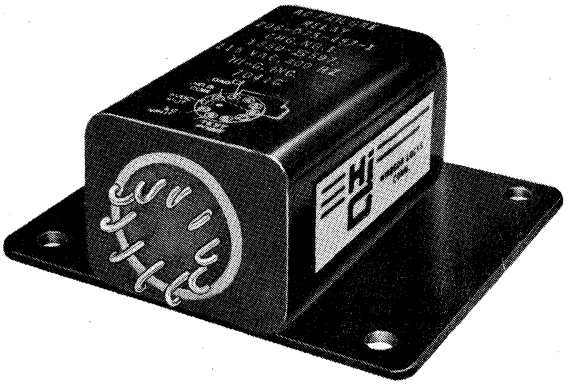
AC AND DC MONITORING
VOLTAGE LEVEL SENSOR
SERIES 1300



FEATURES

DC SENSOR — SERIES 1310

The Hi-G 1310 Series DC Voltage Sensor is essentially a voltage monitoring device operating on a snap-action transistor circuit with low drift and inherent temperature compensation. This device will either open or close a circuit when a predetermined voltage is present at the input.

By using a Hi-G electro-mechanical relay as the output of the voltage sensor, a positive switching action can be achieved with very close difference between pull-in and drop-out voltages.

AC SENSOR — SERIES 1350

The Hi-G 1350 Series AC Voltage Sensor provides an output "signal" when the monitored power line voltage reaches a predetermined level. This rugged unit with reliable solid state design, provides precise, repeatable operation over a wide temperature extreme.

The input voltage is fed into a temperature compensated comparator circuit. When the input reaches the pre-set level, transistor amplifiers switch the output relay to provide a "signal." This output may control any external device, process, or warning system to protect expensive equipment.

The units for both series are potted and hermetically sealed and are designed to meet the environmental requirements of airborne applications.

vacuum relays

INTRODUCTION: Vacuum relays as manufactured by ITT Jennings are available for utilization in the control of high power equipment and circuits. Standard units are available for current ratings of 75 amps, peak voltage levels to 30 kv, and transferring power at frequencies through the VHF band.

ADVANTAGES: Because of the higher dielectric strength of the vacuum relay (1000 volts/mil working), small contact spacing and lower resultant travel allows the design of small, low-bounce actuating mechanisms which lead to minimum size units.

APPLICATIONS: The majority of applications of these units include the switching of antennas, frequency bands, transmit-receive modes, power circuits, and elements in pulse forming networks.

RELAYS SCANNERS/MATRICES LED DISPLAYS

ITI specializes in solving signal switching problems using many different switching devices and systems. Shown here are three product lines developed to solve difficult problems. If you have a switching problem contact our engineering staff.

MAGNETIC LATCHING RELAYS

The Model OLR Magnetic Latching Relay is a proprietary device for difficult switching and control problems where circuits, or preset data patterns must be maintained during primary power failure. The relay consumed **no** power during the holding time. Employing advanced technology to close and open the magnetic reed switches, no prebiasing permanent magnets are used in the design. There is no requirement to reduce the residual magnetic field to zero to open the reed switches. A very high residual magnetic field is generated by the latch pulse resulting in a relay which will withstand severe shock and vibration.

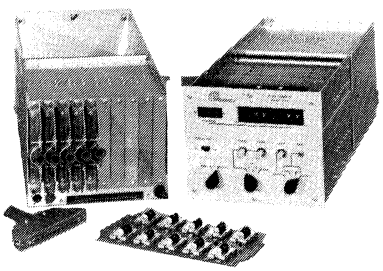
SCANNERS / MATRICES



The Model 7100 family of switching products lets you design your own switching system for data acquisition, test instrumentation, or signal distribution. Designed to be compatible with all DTL and TTL logic blocks, remote control from other equipment is straight forward.

The SCAN CONTROL contains the necessary power supplies and control circuitry to permit scanning from one to one-thousand channels of information. Plug-in SCAN CARDS (1, 2, 3 or 4 pole) have a ten channel capacity and up to ten cards may be installed in a half-rack width either behind the SCAN CONTROL or separate SCAN EXPANDER modules (also half-rack). Expanding the number of signals to be scanned is simply a matter of adding SCAN CARDS for ten-channel increments and SCAN EXPANDERS for one-hundred channel increments.

All scanning functions may be controlled from the front panel but for applications where remote control is required, the EXT control mode disables the front panel to prevent conflicts in the operation of the unit.

Leads are provided for remote selection of FIRST and LAST channels, remote START, STDBY and ADV, and remote readout of the channel identification digits, "closure complete", "scan complete", and "on last channel".

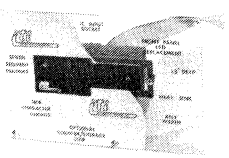
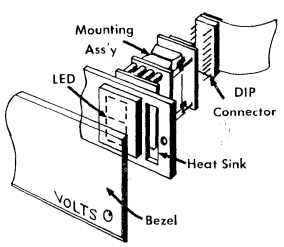
LED DISPLAYS

FRONT REPLACEABLE MODULAR ACCEPTS EITHER .27 OR .60 HIGH CHARACTERS





Model 7108, VERSADISPLAY, is a prepackaged LED (light emitting diode) display assembly which will accept either a standard DIP integrated circuit light package for character heights of .275 inches or the new enlarged display packages with .6 inch high characters. The LED display plug into I.C. sockets permitting easy replacement from the front of the assembly. The assembly is not prepackaged into a given chassis but is provided in a form for custom installation.

The assembly is formed as a series of circuit cards mounted one over the other to minimize the amount of panel space occupied. The first two layers contain the I.C. socket for the display and a seven segment decoder package. The third layer can be supplied with a number of different options. The unit can be provided with only a I.C. socket for connecting positive logic inputs to drive the seven segment decoder, or a I.C. chip can be mounted which can store the input information and drive the seven segment decoder directly. This I.C. chip can be a quad latch or a counting module. The stored information can also be extended to other circuits from the quad latch or the counting circuit. In this manner, the display module can be used as a counter with attached display directly.

The connection to the display is thru a I.C. socket mounted on the back of the third layer of the assembly. A 16 pin DIP socket is provided. Pre-assembled cables are available for the unit. A panel mounted filter is provided which can be engraved or screened with the desired nomenclature. This cover is designed for application directly to the front panel. The digital displays are riveted to a special heat dissipating assembly which also is the mounting structure for attaching the unit to a panel or chassis.

KILOVAC vacuum relays (ceramic or glass) are specified by design engineers for performance and reliability not available in conventional relays:

HIGH VOLTAGE ISOLATION: 2000 volts per mil of contact gap with predictable, repeatable isolation well in excess of rated values.

LOW AND STABLE CONTACT RESISTANCE: 0.015 ohms typical, with no contact oxidation or maintenance.

FAST SWITCHING TIME: 10 ms typical, due to small contact gap and short armature travel.

LONG LIFE: Millions of cycles with minimum degradation in electrical performance.

Any one of these standard features will justify your selection of KILOVAC vacuum relays. KILOVAC design and years of production experience permits immediate off-the-shelf delivery from a broad product line with voltages up to 100 KV. Special modifications provided in extremely short order.

High vacuum technology has made high voltage switching practical with considerable savings in space and weight. KILOVAC uses the latest in vacuum pumping techniques, utilizing the "ion" type pump and achieving, in production, hard vacuums to 10^{-8} mm of mercury or better. Special manufacturing techniques include kovar-to-glass seals, final assembly in a dust and contaminant free area, specially selected glass and specially developed KILOVAC high voltage aging techniques.

KILOVAC relays are widely used in ECM, communications, sonar, radar, pulse-forming networks, medical electronics, and other high voltage equipment, or low voltage equipment where extreme reliability is a must. Many KILOVAC models are interchangeable with other manufacturers' types.

KILOVAC's broad line and "Quick Reaction Time" is geared to your most critical delivery schedule.

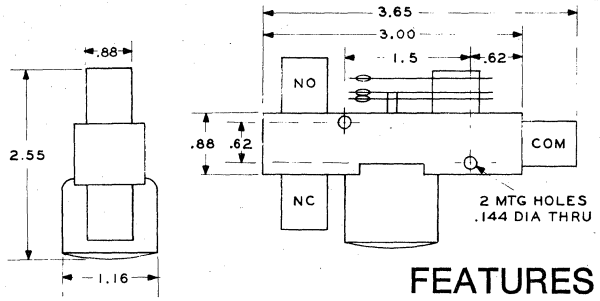
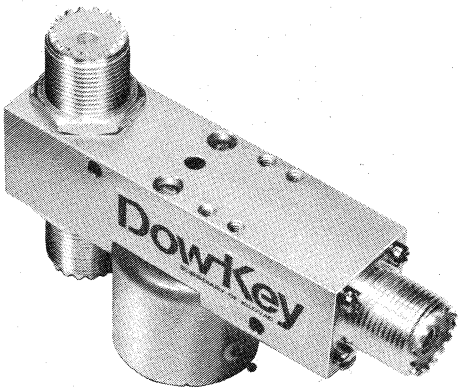
SERIES 60 SPDT Remote Coaxial Relay





FEATURES

The Series 60 are remotely operated, ruggedly constructed, SPDT coaxial relays designed for operation to one Kw. They are available with or without two Form C auxiliary contacts. For transmit-receive applications, they are available with a special high-isolation "G" connector at the NC or receive position. The "G" connector increases the isolation to greater than −100 dB at frequencies up to 500 MHz, but reduces the power rating of the normally-closed connector to 20 watts. "G" connectors will increase VSWR above 400 MHz. Data given for the Series 60 is applicable when used in a 50-ohm transmission line. UHF connectors are not recommended above 400 MHz. Standard coils are 12 Vdc (48 ohms), 26 Vdc (245 ohms) and 115 Vac (5000 ohms).

Ordering Information

In the data given for each Dow-Key relay series, the first two or three digits denote the series or basic relay type. The "XX" following the hyphen represents the coil voltage; refer to the coil data table and replace XX with the appropriate coil number. The next two digits designate the type of connector. The final two digits, when used, indicate auxiliary contacts or special terminations.

Using the Series 60 SPDT remote coaxial relay as an example, assume a relay with UHF connectors and 2C auxiliary contacts, with a 12 Vdc coil is wanted. The numbers shown in the Connectors and Part Numbers table are 60-XX0442. Referring to the Coil Data, the coil number is found to be 22. Thus, the part number would be 60-220442.

Various other coils and connectors, as well as certain other modifications, are available in addition to the standard series shown in this catalog. Please contact the factory for your special requirements.

Coil Data

Standard coil voltages are 12 Vdc, 26 Vdc, and 115 Vac, except for vacuum coaxial relays, which are also available at 48 Vdc and 110 Vdc in standard models. Other voltages listed in the table below are available on special order at a slight premium price or in minimum-order quantities.

Part No. Digits	Nominal Volts	Part No. Digits	Nominal Volts
21	6 Vdc	25**	110 Vdc
22*	12 Vdc	26*†	115 Vac
23*	26 Vdc	64††	220 Vac
24**	48 Vdc		

* Standard Coils

** Also standard for vacuum coaxial relays only.

† External diode rectifier supplied with vacuum coaxial relays (not required with other models).

†† Not available on vacuum coaxial relays.
(Within normal temperature and voltage ranges, all the listed coils are rated for continuous duty.)

Connector Data

Connectors are 50-ohm female jack type, unless otherwise specified. The dimensions, materials and finishes are in accordance with applicable military specifications. In many cases, standard 50-ohm relays and switches may be used without introducing significant discontinuities in 75 and 90-ohm impedance circuits at the frequencies where the higher impedance cables are normally employed.

Only the most popular connector types are listed with each coaxial relay or switch described in this catalogue. Within available space limitations, a number of other connectors are available on special order. These include types TNC, HN, C, SC, OSM, and others. Contact the factory for your special connector requirements.

Environmental Data

Design characteristics of Dow-Key relays and switches are generally based on the requirements of specification MIL-S-3928 and the test procedures of MIL-STD-202. In general, the criteria for shock and vibration resistance are operational requirements of no contact opening in excess of 10 microseconds. Non-operating tests may be performed at much higher acceleration levels with no subsequent electrical or mechanical impairment. Shock capability ranges from 15 to 50 g, and vibration capability from 10 g at 55 Hz to 10 g at 2000 Hz. Temperature tolerances are from −55° to +125°C, with most relays bracketed between −55° and +85°C. Complete, detailed information for individual relays and switches is available on request.

VSWR and Isolation Data

Listed below are typical VSWR and isolation values for Dow-Key coaxial relays and switches. The VSWR figures indicate the discontinuity introduced by the addition of the relay or switch in a matched system. Isolation data are in decibels, and indicate the magnitude of leakage to an open terminal when that terminal is terminated in a resistive load equal to characteristic impedance of the system. Type UHF connectors are not recommended for use at frequencies above 400 MHz. Their use above that frequency may cause a substantial increase in VSWR.

SOLID FRAME SOLENOIDS

Liberty Controls, Inc. has a complete line of solid frame solenoids which can be tailored to fit your needs. These shown below are the standard line which cover a variety of applications. Each of the below pull solenoids are complimented by a push type with similar characteristics. Plungers and plunger stops are made from a special steel annealed after all machining for maximum efficiency.

Continuous rated units should be used whenever possible. When the mechanical push/pull required exceeds the capabilities of a continuous rated coil, it is important to give us complete information regarding the intended duty cycle so that we may design and supply the best coil for your application. When one of these units will be energized for a period of four (4) minutes or longer, a continuous duty coil **must** be used. Where intermittent coils are to be used the per cent of "on time" is related to this four (4) minute period.

We have designed and built many **special solenoids** including push and pull, very large, and very small units. We are interested in looking at your special requirements.

TELEPHONE TYPE RELAYS

Liberty Controls makes high quality telephone type relays for many special applications as indicated below. Contact materials of the finest quality are used to make any of the contact form arrangements. Special engineering is available for any type of telephone relay application.

Coil characteristics are tailored to meet your needs and are available as single wound, double wound, concentric wound, and high resistance wound. Copper slugs and sleeves can be used to meet your special operate and release timing needs.

Specially annealed heelpieces and armatures are used to give the most efficient magnetic properties available and bearing pins are used throughout our entire line of telephone relays.

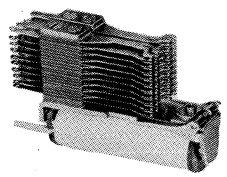
HOW TO ORDER TELEPHONE TYPE RELAYS

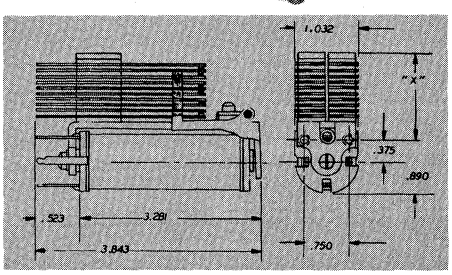
The following information should be provided when ordering telephone type relays:

TYPE	OPERATION	COIL VOLTAGE
B	QA — Quick Acting — Available on DC units only	6VDC or AC
C	SO — Slow Operate — Available on DC units only	12VDC or AC
F	SR — Slow Release — Available on DC units only	24VDC or AC
G		48VDC or AC
M	AC — Alternating Current in quick acting only	110VDC or AC
S		230VDC or AC

Specify pileup information as to contact forms (A, B, C, D, & E) and number of each.
Also indicate whether one or two pileups are required.

SERIES B RELAY

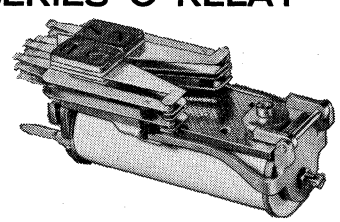


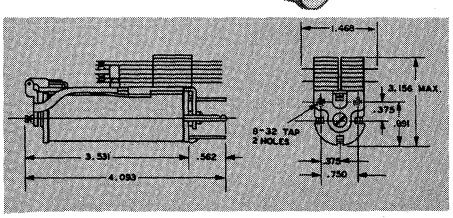


The Series B Telephone type relay is very similar to the Series C with the following exceptions. It is narrower than the "C" and is therefore better for applications where many relays are needed mounted close together. It also has bifurcated twin contacts which give a surer "make" contact. The Series B is the quality leader of the telephone type relays. This relay is ideal for computers, fire control, pulsing, or switching functions.

- **ELECTRICAL CHARACTERISTICS:**
  - **Contacts:** Bifurcated contacts standard but single contacts available. Specify the electrical characteristics you desire.
  - **Pileups:** Maximum of 20 springs in each pileup (one or two pileups)
  - **Operating Voltages:** Up to 230 V AC or DC
  - **Voltage Breakdown:** 1500 V RMS 60 Hz. (higher is required)
  - **Terminals:** Solder Type
  - **Mounting:** Heelpiece drilled and tapped for two 8-32 screws.
  - **Special:** Mounting hardware and cover are available. Can be provided as a socket plug-in relay. Also available hermetically sealed. See special applications.

SERIES C RELAY





The Series C Telephone type relay is recommended for applications which require rapid opening and closing of circuits. It is the most sensitive relay because of its length. It is available in the quick acting, slow operate, and slow release configurations, and thus can be designed to fit many applications. It is also available for AC application.

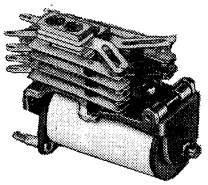
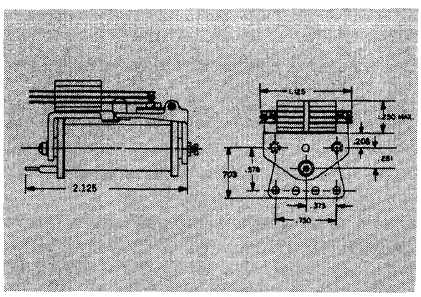
TELEPHONE TYPE RELAYS

SERIES G RELAY





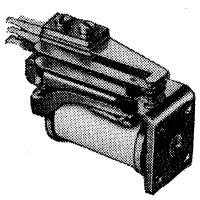
The Series G relay combines the best features of the conventional telephone type relay, such as, the Series C and the special advantages of extremely small size, lightweight, and unusual resistance to vibration.

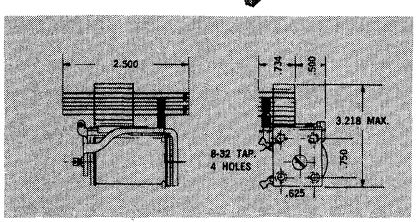
It has the same sturdy construction, large contact-spring capacity, sensitivity, and adaptability to a wide range of specifications that has made the Type "C" so popular.

It has the feature of independent twin contacts. The long flexible contact fingers of the bifurcated stationary springs allow the twin contacts to operate independently of each other. This assures that one will close even when the other is blocked by dirt or grit.

- **ELECTRICAL CHARACTERISTICS:**
  - **Contacts:** Standard contacts are bifurcated, but many materials are available to meet your specifications.
  - **Pileups:** Maximum of 20 springs in each pileup (one or two pileups)
  - **Operating Voltage:** GQA up to 150 VDC; GSO and GSR up to 110 VDC; GAC up to 220 VAC
  - **Terminals:** Solder Type, printed circuit type, or GQIN insertable terminals for socket mounting.
  - **Mounting:** Heelpiece drilled and tapped for two 6-32 screws.
  - **Special:** Available in 16 pin or 28 pin cover and socket arrangement. See special applications. Hermetically sealed relays also available.

SERIES M RELAY





The Series M has all the features of the Type "C", except that is employs a shorter heelpiece and coil. The sensitivity of the M relay is not as great and the time delay is smaller when the coil is equipped with a copper slug.

- **ELECTRICAL CHARACTERISTICS:**
  - **Contacts:** Many contact materials are available. Please specify your rating needs.
  - **Pileup:** Maximum of 12 springs in pileup (single pileup only) Micro-switch available.
  - **Operating Voltage:** MQA up to 135 VDC; MSO and MSR up to 115 VDC; MAC up to 220 VAC
  - **Voltage Breakdown:** 1500 V RMS 60 Hz. (higher if required)
  - **Terminals:** Solder type.
  - **Mounting:** Heelpiece is drilled and tapped for four 8-32 screws.

GENERAL PURPOSE TYPE RELAYS

Liberty Controls has an outstanding reputation for its line of General Purpose Relays. These relays perform dependably in many diverse applications including light to medium switching and plate circuit operations, in process controls and communication equipment. More recently many of these types of relays have been used as safety features on power equipment, such as, line monitoring for stray currents, discharging voltage on shutdown, and equipment shutdown through fault detection.

A wide variety of contact arrangements and ratings are available in our general purpose relay family. Minimum contact pressures of 25 grams are maintained on the smaller relays while the larger power relays perform at upwards of 200 grams contact pressure. Standard contacts are made of Silver Cadmium Oxide for low resistance qualities and then gold flashed to prevent corrosion and retard pitting which generally occurs with inductive loads.

SERIES 210 RELAY

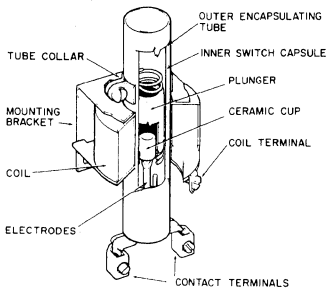
Magnecraft® mercury displacement power relays



TYPE BSX-CUTAWAY VIEW

FEATURES:

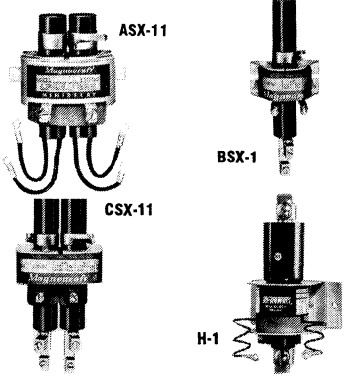
- INERT HYDROGEN ATMOSPHERE FOR RAPID ARC-QUENCHING
- 100% INSPECTED
- DESIGNED FOR U.L. CSA APPROVAL
- HERMETICALLY SEALED
- MERCURY-TO-MERCURY CONTACTS
- SILENT
- ACCESSIBLE TERMINALS
- HYBRID RELAY/SOLID STATE PACKAGES

NOMALLY OPEN, COIL ENERGIZED:
Activated coil pulls the magnetic plunger sharply downward, displacing mercury from lower electrode reservoir sufficiently to flood the mercury-filled ceramic (alumina) cup surrounding the other electrode. The action produces a sharp, clean contact between the two mercury pools.

COIL DE-ENERGIZED:
The plunger floats high in the mercury pool causing the mercury level to drop sharply, thus breaking the liquid mercury contact.

ALSO AVAILABLE FOR NORMALLY CLOSED OPERATION

"HI-POWER" armored shell



High performance relays have hermetically sealed armored shells with ceramic lined electrode chamber, epoxy insulation. class 150 thermal time delay relay

2 amp NC or NO contacts — ±10% repeatability

1 29/32" x 1 9/32" x 13/16"

Efficient, low-cost units used in conjunction with various relays for delayed making or breaking of controlled circuits. Applicable wherever a time delay of 5 to 60 seconds is needed. Operating on the bimetal thermal principle, these types are housed in unglazed porcelain, and are obtainable with either normally-open or normally-closed contacts.

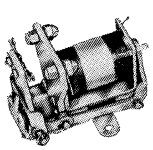
class 158 high voltage relays

Up to 5000 Volts



3 1/16" x 2 7/32" x 1 29/32"

The Class 158 relay was developed especially for making and breaking high voltage circuits of low current capacities. Its excellent insulation characteristics will permit the relay to handle high voltages than relays of comparable size. A system of levers operating the armature provides the necessary wide gap for high voltage switching, but keeps the size of the relay to a minimum. The contact assembly is mounted on ceramic to insure high insulation plus strength and low energy loss. The specially designed contact assembly provides for minimum bounce. The ¼" diameter silver cadmium oxide contacts will break up to 5000 V RMS at 200 milliamps current.

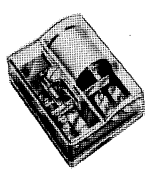
class 62 ultra-sensitive relays

1 amp. SPDT contacts



2 5/8" x 1 15/16" x 2 1/16"

The Class 62 is an ultra-sensitive, durable, dustite and fully adjustable relay incomparable for use in any DC circuit restricted to a few thousandths of a watt power consumption. The counter-balanced armature design permits excellent operation in any position. The transparent, molded plastic cover guards against dust or dirt reaching the contacts or other working parts — yet allows immediate visual inspection. The sturdy molded bakelite base has both screw and solder terminal connectors, and convenient means of mounting is provided.
Standard factory adjustment is 5 milliwatt sensitivity and field adjustments are easily made by using the vernier screws. The silver contacts and spring tenion can be accurately and permanently set — yet easily changed.
Mounting Data: 2 holes ⅝" dia.

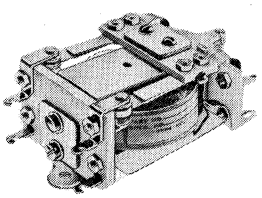
Magnecraft® antenna relays

class 151 dpdt ½ kilowatt 10 amp. R.F. relays / ac or dc operation



2 13/16" x 1 23/32" x 1 15/32"

The Class 151 is designed specifically for Radio Frequency operation. The small size of this unit makes it ideal for use in compact sets where the load does not exceed ½ KW. High contact pressure is obtained through the use of long phosphor bronze springs. Low-loss handling of radio frequency energy is assured by the steatite insulation, and adequate spacing between contacts. This relay is fast and positive in action and will operate in any position. Standard contact rating is 10 amps resistive at 115 VAC or 28 VDC.
Mounting Data: 2 tapped holes; 6-32 NC-2; 2" centers.

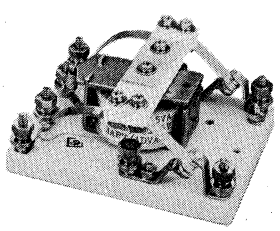
class 155 rf relays / 15 amp. dpdt — 1 kilowatt



3 19/32" x 2 25/32" x 1 21/32"

The Class 155 relay is designed especially for heavy duty Radio Frequency transmitter antenna changeover, and high voltage switching applications. This relay is for fixed-station usage with a conservative rating of 1 KW. It is also ideal for switching industrial loads because of its ¼" diameter silver contacts and wide contact gap. The Class 155 relay is built for easy connection to antenna lines and is available with auxiliary single pole single throw normally open contacts. Insulated with ceramic steatite. Excellent wiping action of contacts assures flow of most minute currents for receiving positions.
Mounting Data: 4 holes .157" dia.; clearance for 6-32 screws.

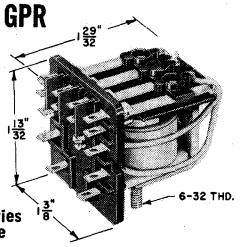
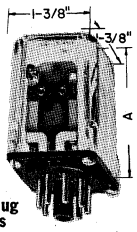
OHMITE® electro-mechanical relays

MODEL GPR



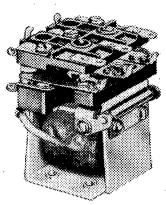
GPR Series 4-Pole

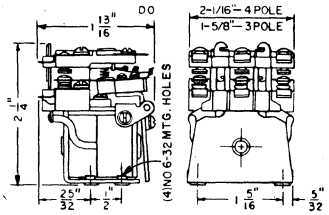


For Octal Plug GPR Series

Simple, rugged, low cost relays handling substantial power for small size. Uncomplicated design provides unusual flexibility for making and changing connection and mounting.

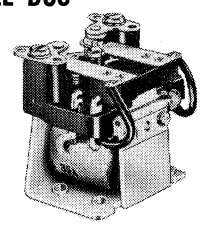
MODEL DO

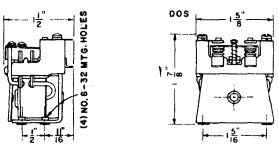




Particularly adaptable to aircraft and mobile equipment applications where severe shock and vibration are encountered. Design of molded parts around contact arms protects against mechanical injury. Stocked in 3-pole or 4-pole type, and also in hermetic enclosures and in latching types.

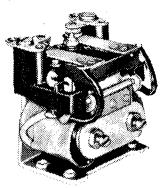
MODEL DOS

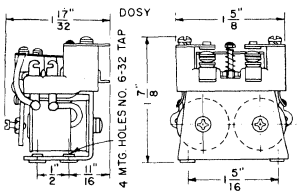




Wide application, general purpose relay, compact and lightweight. Handles loads usually demanded of much larger relays. Meets rigorous aircraft relay standards.

SENSITIVE MODEL DOSY





Similar in construction to Model DOS relay but equipped with twin coils for increased sensitivity. The DOSY relay is adaptable to a wide range of electronic control applications such as plate circuit controls, or as overload or underload controls in D.C. circuits to signal attainment of predetermined current levels.

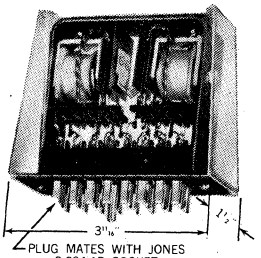
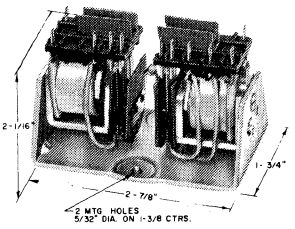
MODEL GPR LATCHING RELAYS



Enclosed Latching Relay

Relay 6PDT Latching



Latching relays consist of two GPR relays with armatures linked so that the n.o. contacts of one are mechanically latched in closed position when, and after, this relay is energized. When 2nd relay is energized, first relay restores and latches 2nd. Permits switching of twice the number of circuits and holding without coil current.

POTTER & BRUMFIELD RELAYS

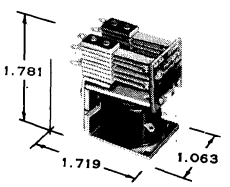
Princeton, Indiana 47670 (812) 385-5251 TWX: 810-350-2343

Potter & Brumfield's broad line of standard relays is listed on the following pages with dimensions, terminal and mounting information. We offer a wide selection of standard relays to fit practically any type of physical and electrical contact requirement you might encounter. You can order any of these relays from your local P&B authorized distributor. He will give you fast, economical, off-the-shelf service.

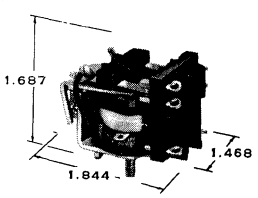
And if a standard model won't meet your requirements, we'll make one that will. Unusual requirements such as the so-called dry circuit (low voltage circuits with extremely small electron flow) cannot be handled by just any relay. Almost without exception, this application requires a relay with special adjustments, contact materials, or other special features. Non-resistive load elements can also cause contact problems. So, check with your P&B representative before making a final selection.

P&B applications engineers, particularly, are at your service to help solve any unusual switching problems. Special contact forms or materials, coil voltages, terminal configurations, enclosures, or many other non-standard electrical or mechanical modifications can be engineered to specifications which meet your application requirements.

GA SERIES Low cost, all purpose, multiple contact, voltage switching relay. Used for many industrial control applications. Tinned, pierced solder type terminals. Contacts: Silver, designed for maximum self-cleaning action. Mounting: No. 8-32 tapped core with locating boss. Weight: 3½ ozs.
See GF Series for similar relays having 10 amp ratings.



KA AND KAP SERIES Small, low cost, highly efficient general purpose relays for handling light power loads such as small motors, solenoids and other relays, and general automation work. All KA and KAP relays with "Y" suffix bear CSA listing (File No. LR-15734) and carry U/L component recognition (File No. E22575). Mechanical life expectancy: 10 million operations. Duty: Continuous Contacts: Movable, Gold-flashed silver; stationary, Silver overlay.



The KA is the open version of this series. Mounting: One No. 6-32 threaded stud and locating tab on .438 centers. Wt: 2 ozs. The KAP is the enclosed model and is protected by a clear polycarbonate dust cover. Terminals: 8 or 11-pin plug. Weight: 3 ozs.
"G" suffix indicates silver-cadmium oxide contacts on movable rated 10 amps.

LNP SERIES are sensitive AC general purpose relays for use where limited control power is available. Has sensitivity of 0.75 volt-ampere at pick-up or nominal voltage. Operates from output of light sensitive resistors, switches and other low power control elements. Double pole, double throw contacts are rated 10 amperes @ 28V DC or 240V 60 Hz, 80% PF. Has same package, termination and mounting advantages of KUP Series general purpose relays. Terminals are .187" solder/quick-connect and fit all standard KU Series sockets. Weight: 3.0 ozs.

R10L SERIES Has a light emitting diode (LED) indicator. LED produces highly visible red light when relay coil is energized. Especially useful when troubleshooting an instrument, equipment, or system. LED has long operating life and high reliability. Other operating characteristics same as standard R10 Series relays. LED is available on relays with coils up to 48 volts DC. Relays fit standard R10 Series sockets.

Note: Observe polarity indicated when wiring R10L- with LED.

MOUNTING STRIP FOR R10 RELAYS

Contains twenty pre-punched break-away mounting plates stamped from .064" aluminum. Designed to simplify mounting one or more R10 relays on chassis or racks. Each individual plate accepts a 2, 4, 6, or 8 pole solder terminal R10 relay or socket.

When a socket is used, it is held in place by one #3-48 screw and nut in the hole provided. Or, the relay may be mounted without a socket by inserting its mounting stud through the hole in the plate and fastening a #3-48 nut on relay stud.

Single plates may be mounted over a rectangular hole measuring 1.62" x .750" maximum or a 1.62" round hole.

For rack or panel installation, the entire 20-piece strip (approx. 24" long) may be mounted. Reinforcing of the strip will be required depending on the number of plates used and the particular mounting circumstances.

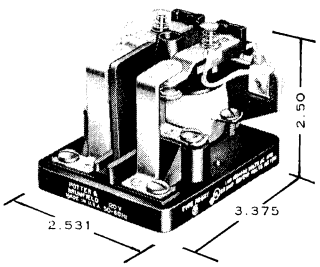
PR SERIES Heavy duty relay for industrial control applications requiring long life and fast action. Industrial screw terminals. All AC and DC models shown carry U/L (File No. E22575) and CSA* listing. PR11AS models have U/L Component Program recognition. Mounting: Two .188" dia. holes on 1.875" centers. Weight: 11 ozs. max. Contacts: Silver. Enclosure: See "PR" Dust Cover under PM Series. The PR11AS relay has auxiliary miniature snap-action switch with SPDT silver contacts rated 5 amps @ 120V AC. Open only, relay with miniature switch will not fit inside cover.



DESIGNATOR CHANGES

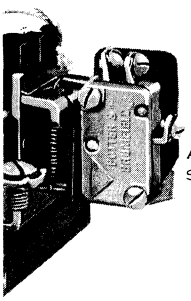
to PR relays have been made. A zero, indicating screw terminals has been added to most relays of this series.

EXAMPLE: PR11AY becomes PR11AY0

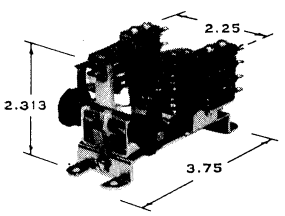
An exception applies to PR relays having an auxiliary switch:

EXAMPLE: PR11AS becomes PRA11AYA

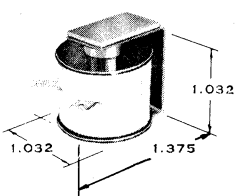
These designator changes have been made throughout the last half of 1972.



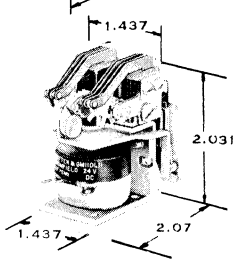
AP SERIES RATCHET, IMPULSE A reliable compact unit for applications requiring on-off or reversing action on alternate operations. Positive ratchet operation at all speeds on impulses as short as 60 ms. Intermittent operation only. Mounting: Three .156" dia. holes on 3.375" x .875" triangular centers. Contacts: Silver. Weight: 7 ozs. Coils for intermittent duty only.



BU BUZZER AC operated coil with a spring steel armature which buzzes when coil is energized. Used extensively in test equipment, laboratories and a host of other applications where a small light weight, dependable buzzer is required. Recognized under the Component Program of Underwriters' Laboratories, Inc. (File No. S1154). Weight: 1⅝ ozs. Mounting: No. 6-32 tapped core.



GM SERIES Unusually versatile switching makes this impulse/sequencing relay especially suitable for single coil latching. The 2 Form C contact arrangement is switched alternately by cam action during drop-out of the armature. It can also be furnished with additional 2 Form C auxiliary contacts (designated by "L"). AC version operates on a 50% coil duty cycle (5 Min. max.). Mounting: 8-32 tapped core with locating boss. Weights: With aux. contacts 4¾ ozs. Without aux. contacts 4 ozs.



The **GM1N10** and **GM1N12** AC or DC use the basic GM structure with uni-directional printed circuit boards with 10 or 12-steps, respectively. The board is attached to an extension of the ratchet shaft. The movable contact arm advances one position each time the armature drops out. Contact rating: .25 amps. Contact arrangement: SP-10 pos. and SP-12 pos. Size: 2.312" x 1.875" x 2".

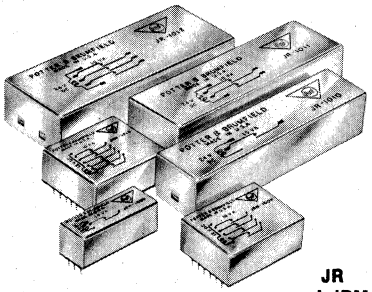
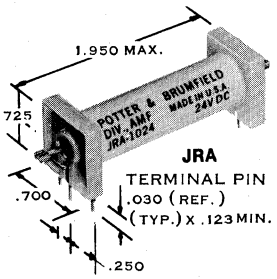
DRY REED

JR STANDARD/JRA LOW COST/JRM MINIATURE



JR and JRM



Fast response, reliable performance, high sensitivity and long life are characteristic of the JR Series dry reed relays. JR standard and JRM miniature relays are especially suited for data processing applications, computer equipment, logic circuitry and various other sophisticated control circuits. The JRA Series low cost relays are limited to applications where stray magnetic fields and interaction of coils will not interfere with their operation. Adequate spacing (not less than .75" separation) is recommended.

TWO TYPES OF CAPSULES

The JRA Series is available only in a Form A (SPST-NO) contact arrangement. Both JR and JRM relays have reed switches with either Form A (SPST-NO) or Form C (SPDT) contact configuration. Biasing with a permanent magnet changes Form A to a Form B (SPST-NC). This arrangement requires that coil polarity be observed. Combining one Form A with one Form B results in a single Form C (SPDT) break-before-make. A "true" Form C (SPDT) uses a reed switch with two stationary and one movable contact. The movable contact is normally closed until the coil is energized.

OPEN STYLE DRY REED RELAYS

FOR .100" x 1.00" GRID LAYOUTS

JRC SERIES open style dry reed relays have P/C terminals arranged to fit popular .100" x 1.00" grid layout. Available in 1 to 5 cavity packages, these small modules provide an array of switching choices including Form A (SPST-NO), Form B (SPST-NC), and combinations of both. Rhodium is the standard contact material rated 10 watts max., .5 amp max., and 200 volts max. for DC resistive loads. Typical operate speeds are 1 millisecond (including bounce) for pick-up and .05 millisecond for drop-out.
Contact protection is recommended to assure long operating life. Approximate Weight: .3 to 1.0 ozs.

SOLID STATE/REED HYBRID RELAYS

JDA SERIES Sensitive, amplifier-driven reed relay features same 0.275" low profile, Dual Thin-Line design as JDT reed relays series. Control signal is amplified by solid state driver circuit with sensitivity of 100 microwatts. Designed to operate from output of DTL and TTL logic circuits in current sourcing mode. Control signals between 2.4 and 30 volts DC will operate the JDA relay when specified supply voltage is applied. Release occurs when control signal is reduced to 0.5V DC, or less. Nominal supply power requirement approximately 490 mW in the activated state. The control voltage change for these amplifier-driven reed relays must exceed 1v/ms to meet intended operating conditions. Contacts are 2 Form A (DPDT-NO) rated 10 watts maximum resistive (50V DC or 0.5 amp max. switching) per contact. Terminals are spaced on 0.1" grid centers for printed circuit board mounting. Approximate weight: 0.4 oz.

JRL LATCHING

This bi-stable dry reed latching relay requires no coil current to maintain contact in either position. Reversing the polarity of the coil causes the contacts to transfer. Designed for reliable memory work, JRL latching relays mount on p.c. board and are not position sensitive. 1 Form A and 2 Form A contacts are rated 15 watts, resistive. Operate time at 25°C is 1.0 millisecond (including bounce). Weight: 2.0 ozs.

MERCURY-WETTED CONTACT RELAYS

Rare long life, high speed, and unvarying dependability—all are the result of the basic component of these relays: a hermetically sealed glass capsule. It contains the contact arrangement and a small reservoir of mercury sealed in a high pressure hydrogen atmosphere. A film of mercury is renewed for every operation—that's why you can think in terms of billions of operations without contact bounce, pits or welds.

TWO TYPES OF CAPSULES

The capsule used in JMF and JMF2 (with 2 capsules) modules, JML and JMS relays has a SPDT, break-before-make (Form C), non-bridging contact arrangement. Each capsule used in JMD, JMP and JM1 to JM4 relays has a SPDT, make-before-break (Form D), bridging contact arrangement. JMF, JMF2, JML, JMP and JMS Series achieve a high rate of sensitivity by factory-adjusted magnet biasing.

All JM Series mercury-wetted contact relays except the JMF2 relays may be operated up to 5 times the Must Operate current shown in the columnar listings. The JMF2 may be operated up to a maximum voltage of twice the Suggested DC Voltage shown.

Mounting Position: Upright mounting required, but deviation from upright to 30° causes only minor deviation in operating characteristics.

CONTACT RATINGS

JMF, JMF2, JML and JMS: 500V max., and 2 amps max., 100VA max.* JMP, JMD and JM1 to JM4: 500V max., and 5 amps max., 250 VA max.

*With contact protection unless used in a low level circuit. Details of a simple protection circuit consisting of resistor and capacitor in series are packed with each relay.

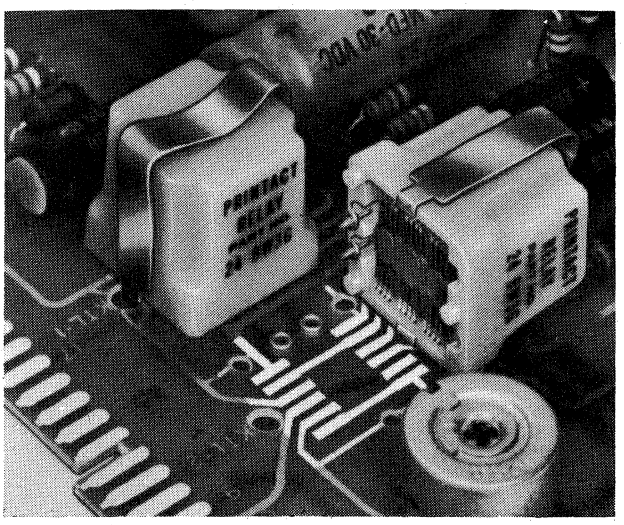
LATCHING AND NON-LATCHING MAGNETIC RELAYS

Plugs into your PC board . . . mates with plated conductors



The Printact relay, which combines printed circuit board technology with advanced electromagnetic design, offers custom features and economies.

Unlike conventional relays adapted for PC board use with terminal pins or sockets for solder mounting, the Printact relay plugs directly into the PC board, reducing costs and production time. The plated pads on the board become the fixed contacts. They mate with the shorting-bar contacts on the pivoting armature assembly, which is the single moving part in the relay. Held by a permanent magnet, this assembly eliminates return springs, pigtails, electrical and mechanical interconnections, which are prone to breakdown and wear, assuring reliable performance for millions of cycles.

The shorting-bar swinger contacts provide for isolated switching between break (NC) and make (NO) pads. Thus, each blade can perform a two-pole function equivalent to one SPSTNC and one SPSTNO. Common switching SPDT (form C) is achieved by bridging one NC pad to one NO pad.

Illustrated above is a Printact 3 blade relay which has its conductor pattern printed to perform a four-pole function consisting of 1A-1B-2C.

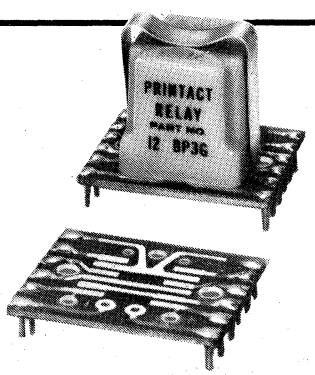
The above patterns, available in 2:1 and 4:1 size, when positioned on the layout, provide the artwork for the contact pads and also locate the coil clamp and relay positioning holes. Thus no layout to dimensions is required. These patterns, when used in conjunction with the PC board fabrication and area plating procedures, detailed in Tech-Notes PR-262D, assure accurate mating of the Printact swinger blades to the conductor pattern.

Design aids, complete catalog and sample with wired test board available upon request.



GENERAL PURPOSE MODULES AVAILABLE

Where a custom board is not planned, send for catalog illustrating a variety of general purpose PC boards with etched and plated switching patterns to accommodate single or multiple relays. Can be chassis mounted with standoff bushings. Solder pads for point-to-point wiring or edge-connector terminals are available.

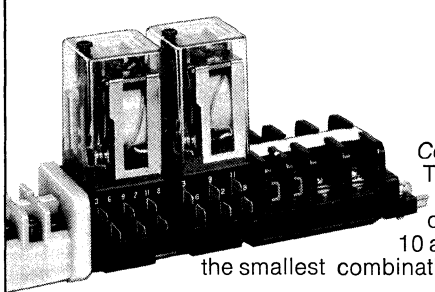
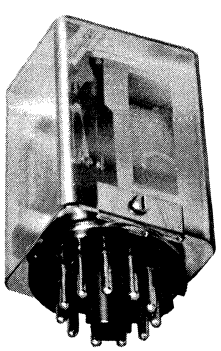
Socket Mounted Version
The Type K general purpose relay is designed for multi-pole switching below 150 volts. Its small size makes it perfect for industrial or commercial control equipment. Troublesome solder connections and pigtail wires have been eliminated to give you an extremely reliable device.



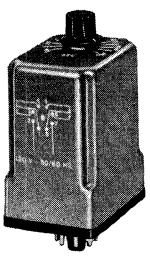
Compact Mounting
Takes up less than 3 square inches of panel space . . . 10 amp relay/socket the smallest combination on the market.



Tube-Type Version
Designed to fit all standard 8 or 11 pin sockets. Interchangeable with other tube-type general purpose relays.

Type J Timing Relay

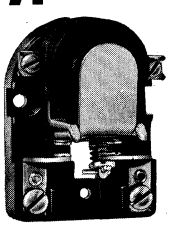
Integral Type K relay and solid state timing circuit.



Solid state timing relays give ±1% accuracy. .05 to 180 sec. knob adjustable, factory fixed or external resistor adjustable. 150 volt. 10 amp DPDT output contacts. Plug-in tube-type mount.

Type C

Most available relay.
Low cost.



600 volts maximum. Rated up to 1½ HP. 1 or 2 poles. Stocked by over 400 distributors.

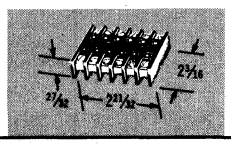
Industrial Plug-in

Simplify panel design and save wiring time with this complete line of matched relays that fill the majority of industrial control needs. Most fit the same standard 12-pin socket; new 4-pole double-throw models below take a slightly larger 14-pin socket. Front-connected socket wiring is on one level with terminals easily accessible for installation and check-out.

All relays have clear, burn-resistant plastic covers. Keyed plugs insure correct insertion. All units have 150 V electrical spacing and withstand 1500 V dielectric test and normal machine vibration.

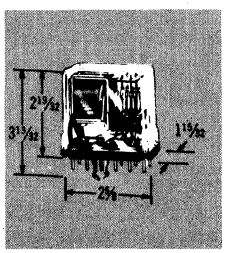
Standard contacts are gold diffused silver-cadmium oxide, nominally rated at 10 amperes when handling resistance type loads.

Standard optional features are listed in the 219 frame tables below. Relays combining several of these features are also available on special order. Many can also be applied to the other plug-in relay types on these two pages. Refer to nearest sales office, or write Struthers-Dunn, Inc., Pitman, New Jersey, for recommendation or quotation.



SOCKET FOR ALL 12-PIN PLUG-IN RELAYS

Type 27390 twelve-terminal socket accepts all 219 frame 12-pin relays shown immediately below and all 211, 236, 237, A255, 349, and RSX alarm relays on page 17. Front-connect screws with captive clamp plates hold up to two #14 wires. Mounted to panel with two 6-32 screws. **Price $2.50.**



GENERAL PURPOSE

Frame 219 twelve pin relays offer three standard contact arrangements for signal load-switching circuits, and are designed for reliability through 20 million operations.

U. L. Recognition: All 12-pin #219 types, except those with 230 Vac coils.

Contact Rating: 10 amps, 115 Vac resistive

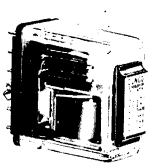
Optional Features



Indicator lamp wired across coil indicates coil energized. Available from stock with 115 Vac coils only.

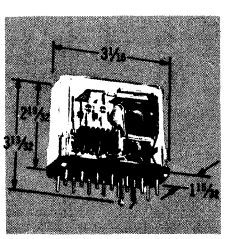
Manual Actuator on cover allows manual operation of relay contacts; spring returns contacts to normal. Available on all models.

Both lamp and actuator can be furnished on 115 Vac or dc coil relays.

For further data: Bulletin B/5219 & B/5219-S1

Bifurcated contacts can be provided on all standard coil and contact combinations for low-level (milliwatt) to 5-ampere loads. Twin contacts of gold diffused fine silver, with adequate pressure and overtravel, assure continuity and reliability.

NEW 4PDT & 6 POLE



These new 219 frame relays provide 4-pole double-throw or 6-pole single-throw switching in a rugged plug-in module that is compatible in design and appearance with the rest of the S-D industrial plug-in line shown on these pages. Same easy installation and check-out; same dependable movement good for 20,000,000 operations. The relays use a slightly larger 14-pin socket to accommodate the two additional terminals. Coil and contact ratings are the same as shown above.

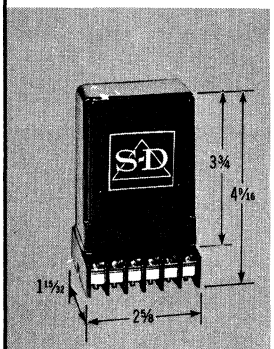
Solid State and Hybrid



SS96BXB and 27390 Socket

100% SOLID STATE RELAYS—total input/output isolation

Model SS96* solid state relays offer almost unlimited life in difficult industrial applications such as the high inrush loads of solenoid valves. They may be intermixed with electro-mechanical relays. Contacts handle 1 amp continuously, 25 amps inrush, 6 to 240 Vac rms. Opto-isolated inputs and continuously gated transformer-coupled triac outputs assure total input/output isolation.

90 to 132 Vac 50/60 Hz primary voltage must be applied continuously in addition to the external 120 Vac control signal. Contacts continue to carry load with voltage at 65 Vac min. These general-purpose relays may be connected for latching by using one NO relay contact. However, "memory" is lost if power fails.

Relays have plastic covers, 12-pin industrial-grade plugs.

Model 13 Power Supply

DC METERING RELAYS—Under and Over Voltage Sensing

Models 11 & 12: Used for precise monitoring of dc voltages and currents. Standard units operate at 1 volt and/or 1 mA dc. Add series resistors for higher voltages and parallel resistors for higher currents. Require 8 Vac primary power, 50 to 400 Hz. Model 13 primary power supply has 120 Vac primary and two isolated 8 Vac secondary windings for powering two model 11's or 12's.

Model 11's are latching types reset by removing primary ac power. Model 12's are ON-OFF types, operating and releasing according to dc signal with approximately 1% differential.

Load contacts on all models are single pole, Form A dry reed switches rated 10 watts maximum at 250 volts maximum or 500 mA maximum non-inductive.

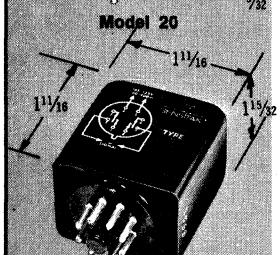
Model 20



Model 22 (11-Pin Tube style base)

DC SENSITIVE RELAYS—Ultra Sensitive, 50 µA & Micro Sensitive, 1 µA

Models 16, 20 & 22: Highly sensitive, low power ON-OFF relays operating from low level dc signals. All models also require dc primary power supply as indicated in tabulation below.

Models 16 and S16 have two Form A dry reed load contacts rated 10 watts at 250 volts maximum or 500 mA maximum non-inductive. Models 20 and 22 have DPDT relay load contacts rated 5 amps at 120 Vac non-inductive. Latching load contacts are available on special order.

Model 22 relays are mounted on 11 pin octal style plugs. All others have solder terminals.

AC NULL SENSING RELAYS—Servo/Differential Controls

Models 14 & 15: Useful in ac bridge networks and with LVDT's to sense and monitor unbalanced conditions. AC primary power supply and ac signal system must be same source since phase relation between primary voltage and signal voltage determines level and direction of unbalance.

Models 14 and 15 differ only in input impedances and signal levels. Primary power is 120 Vac, 50 to 400 Hz. Pull-in vs. dropout differential of signal voltage is approximately 10%.

Load contacts for each direction of unbalance are single pole, Form A dry reed switches rated 10 watts maximum at 250 volts maximum or 500 mA maximum.

Model 42

DELAY ON "OPERATE"
Control voltage energizes output relay after preset delay. Octal plug.

DELAY ON "RELEASE"
Closing pilot switch energizes output relay. Next switch opening starts timing; relay de-energizes upon timeout. Requires continuous primary voltage. 11-pin tube base plug.

MONITOR TIMER
Momentary operation of pilot switch energizes output relay. Switch must cycle open and closed at least once during preset timing period or relay de-energizes. Requires continuous primary voltage. 11-pin tube base plug.

REPEAT CYCLE TIMER
After pilot switch closes, output relay cycles according to separate preset ON and OFF delays. When switch opens, cycle stops after OFF delay. Requires continuous primary voltage. 12-pin plug fits S-D type 27390 socket (**Socket Price** $2.50).

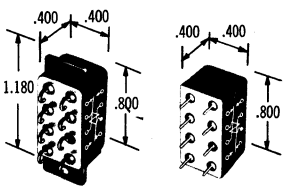
Hermetically Sealed

Specifically designed to withstand the adverse operating environments of aircraft, missile, undersea, and ground-support equipment, the broad S-D military line paces the state of the art in reliability of miniature relays. They are produced in spotlessly clean "white rooms" under rigidly controlled conditions. Flexible, bifurcated contacts are used in most types to assure dependable operation under high shock and vibration. A qualified in-plant testing laboratory, approved by NASA, the Air Force, Army and Navy, assures compliance with applicable MIL specifications.

Typical Specifications

Shock: 25 to 50G for 9 to 11 msec. **Vibration:** 10 to 20G, 1500 to 2000 cps. **Operate Time:** 10 to 20 msec. max. **Release Time:** dc types 5 to 20 msec. max.; ac types 50 msec. max.

HALF-SIZE CRYSTAL CAN RELAYS



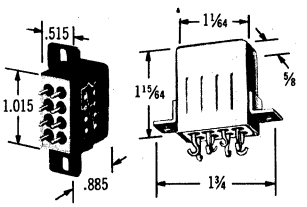
FC-1 FC-1P

FC-1 Series features all-welded internal construction and gold plated DPDT contacts rated low level to 2 amps. "MV" models are individually miss-tested for 5,000 operations to insure reliable low level switching.

FCL-1 Series are energy-saving magnetic latching relays that provide bi-stable operation for logic functions. Physically identical to FC-1 relays, they operate on a pulse of 2 milliwatt-seconds.

Sockets for plug-in types are commercially available.

TWO POLE POWER RELAYS



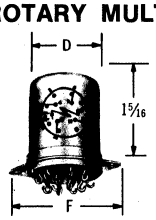
FC-210 & 210P FC-215 & 215P

FC-210 Series are ruggedly constructed power relays with DPDT contacts conservatively rated for resistive loads to 10 amps. All welded internal construction and balanced rotary armatures give high resistance to shock and vibration. Choice of solder or plug-in terminals.

FC-215 Series are similar to FC-210 in rating, but more powerful and in a slightly larger can. Solder hook or plug-in terminals.

Sockets for plug-in types are commercially available.

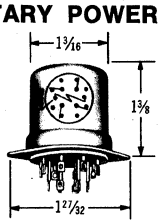
ROTARY MULTIPOLE RELAYS—to MIL-R-5757



FC-4-250 four pole, and FC-6-250 six pole, are cylindrical control relays with 2-amp double-throw contacts. Balanced rotary armatures; solder hook and plug-in terminals.

FC-4-250 D-1 3/4, F-1 21/32
FC-6-250 D-1 3/16, F-1 7/8

ROTARY POWER RELAY



FC-410 packs 10-amp 4PDT contacts in a can only slightly larger than 2-amp cylindrical types. Spaded and pierced tab terminals can be soldered directly or used for plug-in applications with sockets available from various manufacturers.

COMPACT 4-POLE AIR FRAME RELAYS—to MIL-R-6106

Series FCM-410 is one of the smallest relays with 10-amp, 4PDT contacts. An efficient double-coil magnet assembly combines low operating power with high resistance to shock and vibration. Available with solder hook or plug-in terminals.

Contacts: All contacts are double-throw. Most ratings are in maximum amps for non-inductive loads at 28 VDC or 115 VAC, 400 Hz except:
† 0.1 amp, 50 mv DC
* Inductive and resistive ratings

Ambient Temperature Ranges
MIL-R-5757 Types: –65° to 125° C
MIL-R-6106 Types: –70° to 120° C

** **Two-Coil Magnetic Latching Type:** Contacts transfer on alternate pulses to 28 VDC or 115 VAC, 400 Hz coils.

AC Coils: All relays for 115 VAC, 400 Hz operation include self-contained rectifier.

‡**Terminal Designations:**
H = hook type for soldering
L = pierced lugs for soldering
P = pins for plug-in mounting
S = solder pot terminals
W = stranded wire leads in potted header

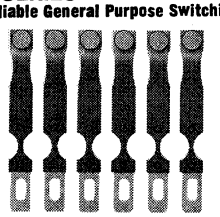
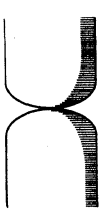
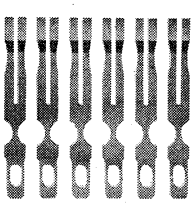
800 SERIES
for reliable General Purpose Switching

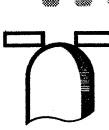




The 800 Series contact is a highly reliable gold-plated button contact. With its high contact pressure and positive wiping action, it is used in control type applications and in general purpose switching, such as relays, valves, lamps, etc. Contact Rating: up to 5 AMPS max.

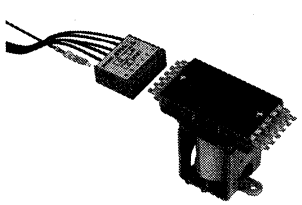
900 SERIES
for reliable Low Level Switching





The 900 Series DATA-RITE™ contact has the reliability of a bifurcated contact with the added feature of two degrees of wiping action. The unique EDGE-TO-DOME contact guarantees a clean surface, which is critical for low level signals. The 900 Series is typically used in computer I/O signals; voice and data-grade communications; thermocouple and strain gauge outputs; all low level switching, whenever reliability is a premium, or whenever slight variations in contact resistance cannot be tolerated. Contact Rating: Microvolts up to 1 AMP max.

T-BAR CONNECTORS



The T-Bar Series 88601 Connector has been specifically designed for use with T-Bar switches and relays. The connector contacts are crimp type which are snapped into a plastic insulator block. After installation, connectors are held in place against shock and vibration by use of a retaining clip.

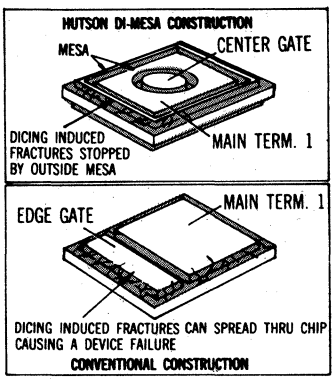
HUTSON INDUSTRIES



DI-MESA* CONSTRUCTION

This unique construction technique, patented by Hutson, provides the proven advantages of inorganic (glass) passivation while eliminating field breakdown of the passivated device.

A problem encountered in any glass passivation is that of minute edge fractures, representing incipient failures, which frequently occur in the glass as a result of laser, saw, scribe or other dicing methods. These fractures usually escape detection during ordinary testing; however, during repeated operational cycling, these fractures spread to the device junction and result in a device failure.

This failure mode is eliminated by Hutson's Di-Mesa construction, which provides a physical barrier to the spread of any fracture which may occur.

The Di-Mesa construction technique also allows, for the first time, unpackaged thyristor chips to be easily and safely handled by chip users for mounting on their substrates.

An applications bulletin on the handling and mounting techniques of thyristors in chip form and the materials required is available on request from Hutson Industries.

Hutson Industries, with in-depth experience in thyristor applications, provides its customers with technical applications assistance. Hutson engineers are always available to assist in the proper selection and application of semiconductor switching devices for specific needs.

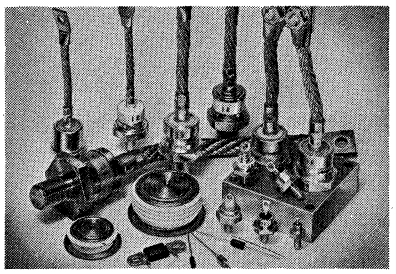
What we know about solid-state conversion/control power products would fill nine books. They're yours for the asking.



Silicon Rectifiers. IR, as the major producer in the field since its inception, provides the widest array of types including Fast Recovery units. IF range is 400 mA-800Amp(AV). PRV: 50-3000V. Our new 50A at 20V Schottky device promises to revolutionize low voltage/high current applications such as IC power supplies — particularly in the 3V-to-5V region.

PACE/pak™ Passivated Assembled Circuit Elements. Originated by IR, solid-state PACE/paks offer many advantages over conventionally fabricated power assemblies such as: lower costs, electrical isolation, greater dissipation efficiency, higher reliability and smaller package size. Applications are power supplies, control circuits, battery chargers and choppers. Presently, standard types come in 25A and 42.5A; 120V and 230V.

Semiconductor Protective Fuses. IR's fast-acting AMPKLIP fuses are rated for "worst case" conditions by power semiconductor specialists to eliminate trial and error testing. All-welded ceramic body assures reliability under high temperatures. Can't char or burn. Superior I^2t allows close match between the fuse and power semiconductor circuits. Wide range of ratings: 130—700V; 10—800A, RMS.

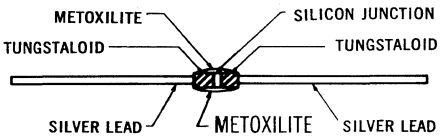
METOXILITE LOW DYNAMIC IMPEDANCE SILICON VOLTAGE REGULATORS

RADIATION RESISTANT



This new series of devices offers significantly lower dynamic impedance when compared at the same operating current to those presently available. For a given dynamic impedance requirement, these regulator diodes can be operated at a lower bias current. Regulation, ripple reduction and efficiency will be improved when these devices are used as regulators. Cased in Metoxilite, they provide the ultimate in hermeticity and ruggedness. The metal oxides which form the outer case are fused directly to the high temperature metallurgically bonded assembly. This Metoxilite device exceeds requirements of current military and space program specifications.

3-PHASE ½ WAVE BRIDGE

Semtech Corporation introduces a new series of "CuPac" 150 high current silicon 3 phase ½ wave bridges with fast recovery characteristics. OFHC** insert base allows the internal "Metoxilite" rectifiers to be heat sunk. The secondary Diallyl Phthalate case provides a long external leakage bath necessary for P.I.V. to 600 volts.

SPECIAL "STACPAC" HIGH POWER SILICON RECTIFIERS

"STACPAC", a new concept in power rectifier stacks for use in high voltage, high current applications. Unique in design, "STACPAC" completely eliminates all the external component parts and solder joints usually found in devices of this type. All components are encapsulated and connected to aluminum discs, that in turn, serve as compensation, cooling fins and corona protection. Internally, "STACPAC" utilizes the Semtech "METOXILITE" Silicon Rectifiers.
"STACPAC" was designed specifically to streamline packaging, replace multiple stud rectifiers and auxiliary compensation in high voltage, high current applications. Semtech has immediate capability to produce special high current — high voltage assemblies up to and exceeding 500K volts. Please contact our representatives for further details.

Sensitrode®

the most reliable rectifier available today!

sensitrode reliability features:

hermetically sealed −195°C to +300°C temperature range

• lowest leakage

The Sensitrode process provides reverse leakage currents as low as 0.1 microamps at peak inverse voltage.

• true avalanche characteristics

Due to the extremely low surface leakage, avalanche breakdown in the Sensitrode rectifier occurs uniformly across the entire junction area offering the best protection possible against transient voltage spikes.

• high operating & storage temperature

Sensitrode glass passivated rectifier chips are metallurgically brazed to the leads allowing maximum operating junction temperature of 200°C and maximum storage temperature of 300°C. Conventional rectifier chips are soldered to the leads and passivated with organic materials limiting their maximum operating temperature to 150°C and storage temperature to 200°C.

• temperature cycling & thermal shock

The unique Sensitrode method of glass passivation makes possible the widest range of temperature cycling available. The glass formula used provides the closest match to the thermal coefficient of silicon.

life-time warranty

The Sensitrode rectifier is unconditionally warranteed for the life of the equipment. For specific warrantee conditions, write or call factory.

single diffused mesa power transistors

These rugged single diffused mesa transistors exhibit low saturation voltage and are extremely well suited in applications where freedom from secondary breakdown is desirable. All devices are 100% safe operating area tested (S.O.A.R.) at maximum BV_{CEO}, wattage, and I_C condition for one second.

ION IMPLANTED DIODES AND RECTIFIERS EPION™

The Ion Implanted fast recovery rectifiers and diodes listed below are produced by a newly developed Ion Implantation process. They feature fast switching types from 500 milliamps to 30 amperes and voltages up to 100 volts. A variety of package sizes are available from DO 20 to DO 5. High efficiency at frequencies of 10 MHz and higher are standard with typical recovery times of 9 nanoseconds.

TRW MICROWAVE TRANSISTORS

Since TRW designed, developed and registered the first 2N4428-29-30-31 series, its world leadership in the microwave transistor field has been unquestioned. In 1968, the 2N5481-82-83 series gave industry its first high power, 2 GHz chain of devices available from a distributor's shelf. Subsequent developments range from the 10 and 20 watt 2N5595-96 series, to electrically rugged (VSWR protected) 1 and 2 GHz units to the new 3 GHz series. These devices are available in a variety of TRW package designs including the TO-117, TO-129, Microstrip, Ultra-Ceramic, and HLP (hermetic-low parasitic).

TRW MICROAMP TRANSISTORS

TRW now introduces to the microwave industry the microwave amplifier which is disguised as a transistor. The MICroAMP allows the design engineer to obtain power bandwidth and efficiency. The MICroAMP has a 50Ω input and input VSWR of less than 2.0:1.

TRW MICROELECTRONIC BROADBAND UHF POWER AMPLIFIERS

TRW announces a first in power at frequency technology with the introduction of two microelectronic broadband amplifier modules. These modules feature: 50 Ohm input and output impedance, operate off 12V batteries, cover the complete mobile UHF radio bands, are capable of withstanding infinite VSWR at 14V and are stable under all operating conditions of voltage and drive. Some of the advantages of using these modules are improved reliability, size reduction, reduction of production labor, shorter design cycles and cost savings.

TRW LVA DIODES

The LVA device exhibits considerably sharper breakdown characteristics than zeners in the 4-10V range. Above 10V the breakdown mechanism of zener regulators is avalanche which produces a very sharp knee and provides good voltage regulation. Below 10V the field emission phenomenon starts, and as the operating voltage decreases field emission accounts for an increasingly higher percentage of the device breakdown mechanism.

NOTES

1. PRV ratings are specified by letter designation following series number according to the following schedule: Z = 50 V, A = 100 V, B = 200 V, D = 400 V, F = 600 V, H = 800 V, K = 1,000 V.
2. * Asterisk indicates terminal connected to positive load.
3. All dimensions are in inches. Where a dimension is given without a tolerance, it should be considered nominal.
4. All center-tap assemblies and the three phase half wave assembly are available with negative output. Suffix "R" is added to the part number in those cases.
5. The use of a thermal compound between assembly and heatsink surface will assist in limiting case temperature rise.

Specify 5% voltage tolerance by changing third digit from right down one digit. (UZ2820 becomes UZ2720).

Polarity is cathode to stud. For reverse polarity use suffix "R" with part numbers. e.g. UZ7818R

*Voltage ratings for these Models are 39, 43, 51, 62, 68, 82, and 91 respectively.

UNITRODE

The programmable Unijunction Transistor is today's preferred device for low cost timing circuits, oscillators, sensing circuits, and a wide range of other applications where a variable voltage level threshold is desired. Functionally equivalent to standard Unijunction Transistors, Unitrode PUTs offer the superior advantage of versatile programming. External resistors can be added to meet designers' needs in programming I_P, I_V, R_{BB}, and Eta. All units are fully planar passivated and are constructed to the same high quality standards expected from all Unitrode semiconductors.

LIGHT ACTIVATED SCRs

These light activated SCRs can often perform the dual role of light sensing and load actuating. Simple bias adjustment adapts for a wide variety of light sources, from ultrasensitive to well above any undesired ambient illumination. They are ideal for use in isolation switches, punched paper tape and card readers, meter position sensing, intrusion alarms, slave flashes, and a wide variety of other light sensing applications.

HOW TO USE eem

electronic engineers master

1973-74

Need directory information?

EEM contains four complete directories which provide the most up-to-date information available. These directories are listed and described at the right. They appear in all three volumes, with the exception of the Trade Mark Directory which appears only in Volume 1. Directory references to Volume 4 indicate the 1973 edition, which you received in January. That copy of Volume 4 should be retained to complete the 4-volume set.

Add Volume 4/1973 to your copies of Volumes 1, 2 and 3 to make a complete set of **EEM** for 1973-74.

UNITED TECHNICAL PUBLICATIONS

Included in this volume are:

The Product Index and Directory

The Product Index and Directory (green section, page 9) lists more than 6,000 types of electronic products alphabetically, by product. Under each product heading is a complete, alphabetical listing of manufacturers who make that product. **Bold face** listings indicate which manufacturers have provided catalog data on that product in the white pages.

The Manufacturers and Sales Office Directory

The Manufacturers and Sales Office Directory (starts yellow section of each volume) lists more than 3,000 manufacturers of electronic components, materials, instruments, assemblies, systems, and key services. Provided are complete addresses, phone numbers, sales managers' names, names of application engineers, TWX numbers where applicable, selected distributors. **Bold face** listings indicate that manufacturers have provided catalog data in the white pages and that sales offices are listed.

The Distributor Directory (yellow section, page 1594, with black edge marking) lists more than 1,000 electronic distributors and branch locations, alphabetically by distributor's name, geographically by state and city.

Need catalog information?

For complete catalog information on any product, refer to the Product Index and Directory (green section, page 9, all volumes) which provides a complete listing of all the manufacturers who supply a particular product. Those manufacturers listed in bold face with page and volume number references have provided catalog data on this product in the catalog section (white pages) where you can find the information you need. References to Volume 4 indicate the Volume 4 you received in January and which should be retained to complete your 4-volume set of EEM.

Need additional information in a hurry?

Two special telephone services are being maintained for EEM users to provide extra information you need. If you need to determine a local source of supply, just **D.I.A.L. EEM.** This toll-free service (**D**istributor **I**nformation **A**nd **L**istings), provides you with the name of a sales office or distributor in your area who can provide a needed product.
For up-to-the-minute listings of manufacturers who provide certain IC functions, **call the IC UPDATE HOTLINE.** Listings of IC functions are updated daily by manufacturers throughout the country. For information in a hurry, **just D.I.A.L. EEM** — call toll-free 800-645-9200 (in N. Y. State call collect (516) 294-0990). Or **call The IC UPDATE HOTLINE,** Dial toll-free 800-645-9201.

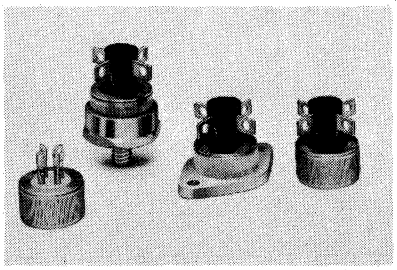
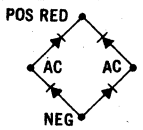
IBR® SILICON INTEGRATED BRIDGE RECTIFIERS

CONTROLLED AVALANCHE TYPES WITH 250V, 450V, & 650V MIN AVALANCHE VOLTAGE
FAST RECOVERY TYPES WITH 200 NANOSECONDS RECOVERY TIME





ELECTRICALLY INSULATED CASE/FULL RATED DC OUTPUT TO 100°C CASE TEMPERATURE

VARO Integrated Bridge Rectifiers offer single-phase full-wave rectification in rigidly constructed, welded packages.

The specified minimum and maximum avalanche characteristics of controlled avalanche types permit selection of decreased PRV safety factors in design considerations without greatly reduced transient voltage vulnerability. The avalanche characteristics insure that the avalanche voltages in the IBR® occur below the point that would degrade or destroy the junction perimeter under transient overvoltage conditions.

The 200 nanoseconds recovery time permits operation of fast recovery types in such high-frequency applications as ultrasonic systems, choppers, inverters, power supplies and low RF interference applications.

Proper heat sinking allows great flexibility in DC output current range. This feature, coupled with the electrically insulated case (insulation strength of 2000 volts minimum) allows the IBR® to be used in many applications where space, current, and cost requirements have not allowed the application of semiconductors.

HIGH VOLTAGE DIFFUSED SILICON POWER RECTIFIERS

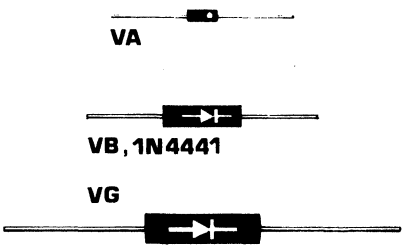
SERIES VA • VB • IN4441 • VG



Varo high voltage and high voltage fast recovery time diffused silicon rectifiers are designed for industrial and commercial applications that require high reliability at an economical cost.

These rectifiers offer high voltage ranges in minimum-sized, epoxy-encapsulated packages with low leakage current. All ratings are obtained without the use of special heat sinks or mounting techniques (except VC Series).

They are designed to withstand 500 G's shock and vibration of 100 Hz with a peak acceleration of 10 G's.

Applications: television receivers, electrostatic power supplies, electrostatic copiers, electrostatic air filters and precipitators, cathode ray tube power supplies, transmitters, and microwave ovens.

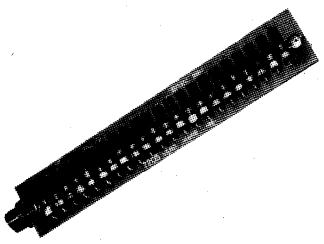
HIGH VOLTAGE RECTIFIERS FOR X-RAY APPARATUS



The required peak reverse voltage determines the number of individual diode packages used in series for the completed, unencapsulated rectifier. Each diode package contains a stack of controlled avalanche chips. In order to achieve the rated voltage and current, the diodes should be submerged in Shell Diala Oil AX electrical Insulating oil or equivalent.

Phase Control SCR's

16-1570 Amps. RMS/50-3000V

Full Capacity Series Features

- All Diffused Design
- Center Fired Gate
- Compression Bonded Encapsulation

which provides

- High Surge Current Capability
- Low Power Dissipation
- Low Thermal Resistance
- High dv/dt

All Medium and High Current Types are available in a POW-R-DISC Package.

POW-R-DISC thyristor package offers:

- Single or double-sided cooling
- Reversible mounting polarity
- Compact size and weight
- Long creepage and strike paths
- Hermetic seal

Most product families can be supplied in an integral heat sink or flat base package as well.

SCR's can be selected for higher junction temperature operation (i.e., $T_J = 150°C$) on special request.

High Frequency SCR's

63-700 Amps. RMS/50-1800V/60-25K Hz

These Full Capacity High Frequency SCR's feature di/namic gate construction which provides

- Low Dynamic Forward Voltage Drops
- High di/dt
- Low Gate Trigger Current

Special Devices

The RSR is designed for pulse modulator application where narrow current pulsewidths and high rates of current rise (di/dt) are required. This product is available for voltages from 600 to 1000 volts and di/dt in excess of 2000 A/μs.

All Full Capacity and JEDEC Products carry the Westinghouse Lifetime Guarantee.

Westinghouse NPN silicon transistors are designed for high power applications in industrial systems, high reliability military and space systems, computers, communication systems and power supplies. These devices offer the outstanding advantages of freedom from thermal fatigue and second breakdown and are 100% power tested. All production lots are tested in accordance with MIL-S-19500. All JEDEC registered devices bear the Westinghouse Lifetime Guarantee symbol.

The broad variety of power transistors are grouped into general purpose, industrial and military categories and by maximum collector current ratings from 4A to 250A. $V_{CEO\ (sus)}$ ranges from 40 to 375 volts. Saturation resistance limits apply at the collector currents given for the gain rating. Typical gain bandwidth product (f_T) ranges from .5 MHz for the alloy devices, to 1 MHz for the single diffused, to 60 MHz for epitaxial base product. The industrial and general purpose low cost transistors are designed expressly to meet the needs of original equipment manufacturers of electronic apparatus. Their low saturation resistance, high collector voltage and high temperature characteristics make them ideally suited for use in regulators, power supplies, inverters and amplifiers.

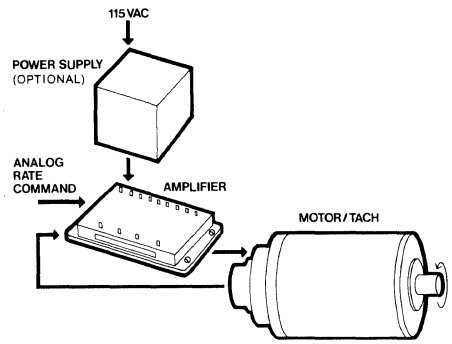
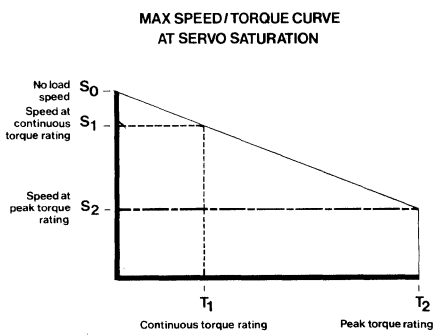
Snapper Series Wide Bandwidth

SPEED/POSITION CONTROL SYSTEMS

(FOR SNAPPER MOTOR AND AMPLIFIER COMPONENTS, SEE **EEM** Vol.2•322 & 2•668)





The SNAPPER Series of wideband, direct drive, servo systems consists of a low inertia, permanent magnet, DC motor/tachometer and a transistorized servo controller. In contrast to an SCR control system, the high gain and wide bandwidth of the SNAPPER system assures response to rapidly varying command signals, rejection of torque disturbances and freedom from parameter variations. In addition to precise average speed regulation, it minimizes instantaneous speed fluctuations.

Features include:

Choice of Output Power	— .01 to .5 HP
Wide Speed Range	— 2000 to 1 bidirectional
Precise speed regulation	— 1 RPM from no load to full load
Low Flutter	— 1% instantaneous speed variation
Excellent Linearity	— 1% of set speed or 1 RPM
Fast Dynamic Response	— Over 200 Hz servo bandwidth

In addition to its use as a speed control system, the SNAPPER can be used as the inner loop of a wideband, high gain position control system. For such applications, provisions are included for adding related position loop circuitry.

The SNAPPER system is modular in concept. Available options include power supply, DC reference, and panel mount. The motor/tachometer can be furnished with an integral optical encoder and a brake.

Listed below are several standard speed control systems. These, however, represent only a few configurations. Many other speed/torque combinations can be supplied.

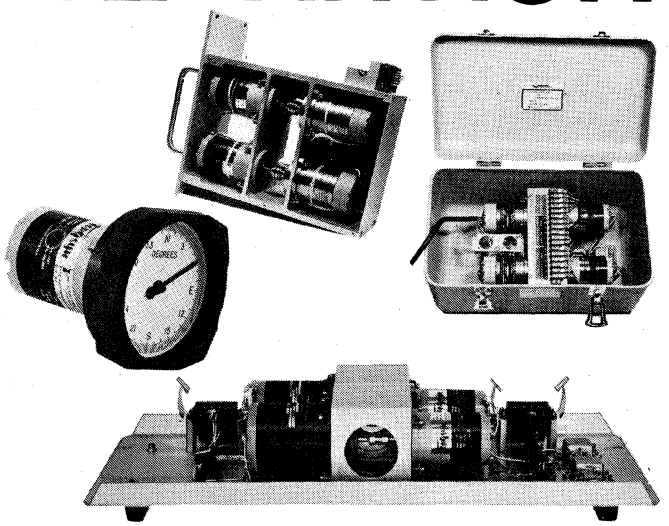
VERNITRON

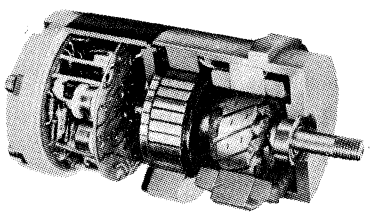
Torqsyn® REMOTE POSITIONERS

The Torqsyn Remote Positioner is a complete gearless servo system in one small package. It is an integrated system that combines a synchro transformer, torque motor, amplifier, stabilization network in a single package. The Torqsyn thus can simplify design, procurement, assembly and maintenance, and improve reliability.

Torqsyn converts input synchro data into accurate shaft position. High input impedance allows it to be driven by low power signal sources. The Torqsyn Remote Positioner may be used to drive potentiometers, encoders, resolvers, indicators, etc. Size 16, 23 and 37 housings are available.

Complete subsystems and assemblies incorporating Torqsyn units can be designed and or produced to requirements. These include synchro signal amplifiers, synchro signal position-indicators and error detectors. In most cases, these subsystem packages are more compact and reliable than conventional systems.





Typical Torqsyn Performance Characteristics @ 25°C

vernitorq® BRUSHLESS DC LIMITED ROTATION TORQUE MOTORS

These versatile, wide angle, two and four-pole motors combine accuracy, quality and economy for positioning, drive, actuation or tensioning systems.

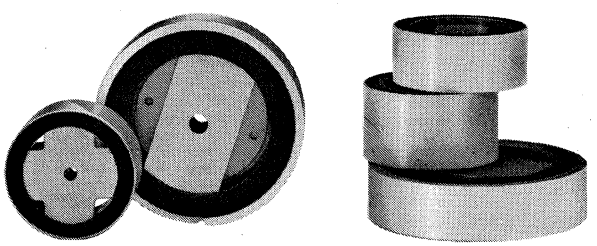
Their high torque to power ratio and rapid acceleration at slow speeds allows direct coupling without gears, with resulting smooth, quiet, reliable operation and compact packaging.

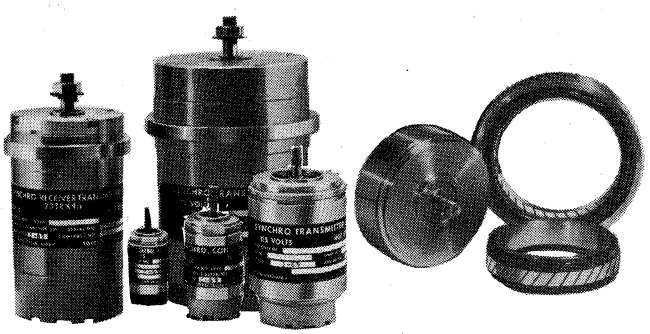
Brushless design of VERNITORQ motors provides infinite resolution, high linearity and sensitivity. Ripple slot-lock effect, electrical/mechanical noise and wear are eliminated.

Many models are available with peak torque ratings from 2 to 500 oz-in. Typical angular excursions are approximately 50 degrees for four-pole designs and 120 degrees for two-pole designs.

Space saving pancake units are only 1.7 to 5.2 inches in diameter. Housed versions also are available. Special designs to individual requirements can be provided.

Brushless AC tachs are also available in these same sizes.





VERNITRON SYNCHROS & RESOLVERS

Standard synchros include frame sizes 8 thru 45, with accuracies down to 3 minutes, in the latest Mil-Spec designs.

Standard resolvers can be furnished in BuWeps frame sizes 8, 11, 15 and 23. Accuracies are to .05% on computing types and 20 seconds on data transmission units. Additional features include temperature compensation, varying voltage, frequency and impedance levels.

Pancake synchros and resolvers are available in single speed, multi-speed (2X to 72X), and dual or triple combinations of speeds. Single speed units have accuracies to 10 seconds, multi-speed units have accuracies to 3 seconds.

MSTE SERIES MINIATURE TOGGLE SWITCHES

"E" Series has the most-wanted features. Waterproof 'O' rings are located inside toggle and on shoulder. A mechanical shoulder on the bottom of bushing prevents "tear-offs" when single mounting nut is employed. High voltage barriers between terminals inside as well as outside. Case has superior plastic material capable of withstanding higher impact; guards against accidental damage. Low-loss case has extremely high resistance between terminals and case ground, and its high temperature coefficient is ideally suited for prolonged soldering and printed circuits. Turret type terminals are used for simplified wiring or for P.C. Extra-wide, solid silver contacts are bonded, not riveted, on copper-silver plated terminals. Long life cycle over 100,000 On-Off operatons. (SPDT). 6 amps @ 125 VAC. Hardware supplied mounted. (On) Indicates momentary positions.

MSTG SERIES MINIATURE TOGGLE SWITCHES

Mustang Series is for designers who prefer the feel of a larger toggle switch but have space limitations behind today's compact panel. Alcoswitch ½" case is utilized, however Mustang mounting requirements are the same as larger switches with 15/32" bushings. This concept is a space-saver in all Mustang models and is especially true in 3 Pole and 4 Pole Series where non-miniature switches are bulky in size. Mustang switches have the most-wanted features as itemized in the "E" Series story with the exception of waterproof 'O' rings. Case construction is of low-loss, high impact and high temperature materials with turret terminals and silver contacts. 6 amps @ 125 VAC. Hardware supplied mounted.

REED SWITCH OPERATED KEYBOARD BANKS

Now designers can be assured of highest reliability in data processing equipment. Short strokes provide a smooth operation of the switch plunger resulting in one of the finest keyboard actions obtainable. It is also suitable for test equipment, communication gear, and many other applications. All details of this switch line are designed for light pressure (5 ounces), operator's convenience, and positive input of data with long life under heavy office type of usage. Highly efficient "single-pole open circuit" reed switches are used assuring reliability and extremely long life expectancy. Square light grey keys (1⅝″) have an industry standard 0-9 marking and format. All switch positions contain a "positive lockout" between sections and rows. This feature prevents more than one position from operating at the same time. This basic keyboard system is designed for flexibility and can be customized to meet the special needs of quantity users. Up to 12 switches may be installed in the basic module in any combination including momentary, or lockout design. FRL must be reset after power failure.

Keyboard switches are supplied with Light Grey Key Tops. Colored Blank Key Tops are available separately (see below); Key Tops with special markings are quoted on request.

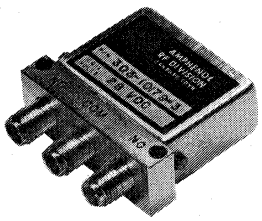
303 Series/ High Isolation Miniature & Standard Size Microwave Coaxial Switches



AMPHENOL 303 SERIES
High Isolation Miniature
Fail-Safe 1P2T

Broadband Miniature Switch Series Offering State-of-the-Art Characteristics through 18 GHz

Ideally suited for applications where crosstalk interference must be kept to an absolute minimum, Amphenol's miniature 303 Series provides uniform characteristics through KU band (18 GHz) with isolation of 60 dB minimum, VSWR of 1.5:1 maximum and insertion loss of 0.5 dB maximum. When operating at lower frequencies, isolation can be greater than 90 dB with 0.2 dB insertion loss and VSWR of 1.2:1.

New Amphenol SMA connectors . . . offering significantly better electrical and mechanical performance than competitive designs . . . contribute to the switch's high reliability and fine electrical performance. The miniature 1P2T weight only 2 ozs. and, excluding terminals, is less than 1½ inches high by $1\frac{11}{32}$ inches wide by ½ inch. In addition to its compact design and reliable RF performance, this switch is capable of operating in environments where temperatures reach 100°C.

Standard Size 303 Series Switches offering High Isolation Qualities through 12.4 GHz

Amphenol's 303 Series of standard size switches is constantly expanding. Cataloged here are a representative collection of the more popular variations. Many combinations of these basic items are available. The ideal switching device tailored for your specific application can be selected from the options described in the table of General Characteristics. This is true of the miniature size 303 Series as well. Whatever combination of specifications you select . . . whether other coil voltage, hermetic sealing, auxiliary contacts, cut-throat latching, etc. . . . the same high isolation and uniform RF performance characteristic of Amphenol's 303 Switch Series will prevail.

Amphenol 303 Series MINIform is the industry's most inexpensive miniature high-power, high-performance line of microwave coaxial switches — offering for the first time superior operational performance through six GHz in an economical unit weighing only 1.2 ounces.

The switches are the smallest and least expensive of this type ever introduced by Amphenol and are designed to outperform all comparable offerings by industry available until now. Displacing less than one-half cubic inch volume, the tiny switches' ratings include performance through 150 watts below specified frequency limitations, offering immediate physical and operational compatibility for a host of signalling, communications and EDP matrix switching applications.

Amphenol 303 Series MINIform switches are 1P2T configurations offered in choice of three popular termination styles: SMA connectors, Amphenol SUB-Minax 27 Series connectors, or printed circuit contacts suitable for solder and solderless wrap board termination. All switches can be provided with coil voltages of 6, 12, 26, 48 and 120 VDC.

Although ideal for typical microwave applications through six GHz where 60 dB isolation is offered by new units, Amphenol's MINIform switches also offer unusually high power handling capabilities for communciations applications for the first time. Through 0 to 1.0 GHz, for example, the MINIform can switch up to 150 watts CW while maintaining maximum VSWR of only 1.1, 0.1 dB insertion loss and 80 dB minimum crosstalk attenuation. Over the range of 1.1 through 3 GHz, VSWR climbs only to 1.2 with power handling capacity of up to 70 watts CW while maintaining 75 dB minimum crosstalk attenuation and 0.1 dB maximum insertion loss.

Coaxial Relays

Precision coax units. Maximum time to operate and release is 20 milliseconds. Gold-plated, fine silver contacts assure reliable low-level operation. Minimum life expectancy is 1,000,000 cycles, when switch is operated at speeds of less than 10 Hz. Switches are impedance matched to 50-ohm cable, though loss is negligible with 75-ohm cable. Operation is break-before-make. All materials are corrosion resistant.

Units meet applicable portions of military connector specs as follows: BNC — Mil-C-3608 and N — Mil-C-71.

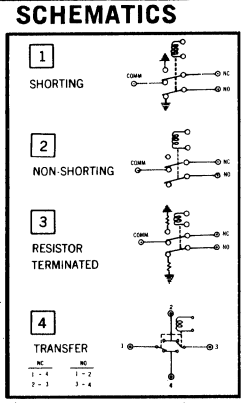
SCHEMATICS



NOTE: High frequency electrical characteristics are typical values (not maximum) as measured in a 50 ohm circuit and may be used for most design analyses. For more exacting applications, maximum values in the frequency range may be obtained upon request. SWR measured to common with a matched 50 ohm termination. **For additional specifications request Amphenol RF Switches Catalog SS-1.**

FUSETRON DUAL-ELEMENT FUSES

Long time-lag prevents useless shut-downs caused by ordinary fuses opening on starting currents or other harmless overloads, yet protects against short-circuits. On normal installations will guard motors against burn-out from overloads or single phasing. U/L Listed for motor running and circuit protection up to 250 volts.

Rotary Selector Switches

WHY ENGINEERS SPECIFY CTS ROTARY SWITCHES

CTS Reliability: The heart of selector switch reliability is the wafer. CTS offers three wafer constructions with uniquely reliable characteristics: The CTS SELECTOR SWITCH 212 WAFER is of a molded, glass alkyd, rivet-free construction which will not break if dropped or jarred. The one-piece molded design eliminates mechanical shifting of stator circuitry and terminals and allows the construction of more compact switches. Automated manufacture provides unprecedented uniformity. In each production run, all switches are identical, terminal placement is exact and permanent — the result is trouble-free assembly into your circuit. The CTS 216 WAFER employs the more conventional "clip" terminals but utilizes unbreakable glass reinforced alkyd for both the rotor and stator. The precision molded stator incorporates strut spacers to evenly space the wafers. An integral molded rib design eliminates radial shifting of contacts and insures increased circuit path insulation. The CTS 223 WAFER features a more compact switch construction. Designed along conventional lines, the 223 wafer can also incorporate back to back clip terminals. The rotor is of a molded Lexan material; the stator is made of molded, glass filled diallyl phthalate. Tight quality control on both wafers and detents from the raw material stage through final assembly and packaging assures you of the fine quality and reliability associated with all CTS products.

CTS Design Flexibility: CTS selector switches provide thousands of variations of shorting and non-shorting circuitry including mixed shorting and non-shorting circuit combinations within the same pole. Design flexibility is further enhanced by a wide selection of index assemblies, three wafer constructions (CTS 212 and 216 wafer constructions can be intermixed on the same switch) and attachable CTS manufactured AC power switches and variable resistors. CTS truly offers a one-source supply for the complete switch package.

CTS Military Switches: CTS types 211, 212 and 215 are available to meet the requirements of MIL-S-3786C, Style SR03/D. CTS type 223 will meet performance specifications of MIL-S-3786C, Style SR05.

CTS Switches are Made to Your Exact Specifications: All orders received for CTS selector switches are handled individually and are custom manufactured to your exact specifications. The majority of applications can be met with switches which are custom designed from parts shown in this catalog, giving you the advantages of lower cost and faster delivery.
On special applications our engineering staff is at your disposal for designing the best and most economical switch to meet your exact requirements.

Note: The only advantage of coin silver with gold plating is that it may be used for either of preceding ratings. However, when dry circuit rating is exceeded, gold plating is effectively removed from contact interfaces and switch cannot then be used for dry circuit.

Option Q Coin Silver (90% Ag-10% Cu). Rating: 5 amps resistive load @ 120 VAC or 28 VDC or 2 amps @ 250 VAC.

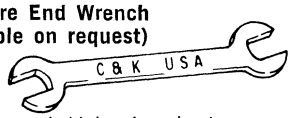
Hardware End Wrench (Available on request)



Switches are held in place by two mounting nuts — one front-of-panel, one back-of-panel. Tighten the back-of-panel nut to avoid stratching or damaging the panel's front. This thin, C & K wrench is designed to facilitate back-of-panel tightening. The wrench fits a standard 1/4-40 hex nut and the panel dress nuts.

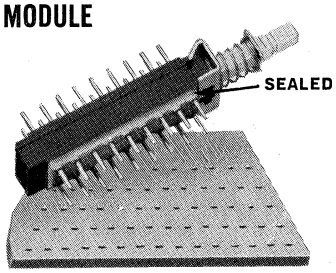
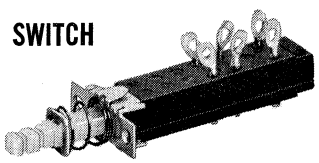
BASIC MODULE



Printed Circuit Mounting

LINE SWITCH



Switches are double throw, non-shorting slide switches available in 2, 4, 6 or 8 pole designs. Basic modules may be mounted by plugging into a printed circuit board, or panel mounted by use of a standard mounting bracket. Modules may be furnished into assemblies of up to 29 stations. Terminal lengths up to .236" on top, to .472" on bottom are standard. Stator materials of **phenolic or diallyl phthalate,** may be selected. Gold plate, of 50 millionths is offered for longer life and low level circuit applications. A few of the buttons available to fit the basic module are listed in the table. Many other button options are offered — consult the factory for entire selection. The epoxy seal option provides a conformal protective coat around the terminals to prevent flux or other contamination within the contact area.

MOMENTARY CONTACT

In this type of operation the button remains in only as long as it is pressed, and it returns to its original position as soon as pressure is released. The switching function is maintained by pressure on the button.

PUSH-PUSH

In this type of operation the button remains in when pressed and must be pressed again to return to its original position. The switching function continues as long as the button is engaged.

PUSH-PULL

In this type of operation the button remains in when pressed and must be pulled out to return to its original position. The switching function continues as long as the button is engaged.

INTERLOCKING AND LOCKOUTS

Standard Interlocking enables the connection of a group of modules so that when any button of the interlock group is pressed, it automatically disengages any other button of the group that was engaged.

Type A — With one button depressed, no other button can be depressed until the first one has been "cleared," or released, by a clearing module.

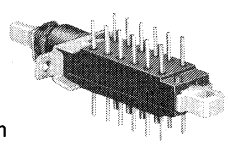
Type C — For a group (2 or more) of PUSH-PUSH switches. Any button depressed has to be released by pushing this same button again before any other button can be depressed.

Type D — An "Interlocking Lockout," used in conjunction with the standard interlock, prevents depressing any two buttons at one time (applicable to a maximum of 8 adjacent positions).

Type D_1 — Uses "Interlocking Lockout." Same as Type D except two row interlock with lockout. Available only with interlocking modules. Lockout will function in any row but not row to row.

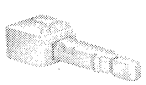
NOTE: Also use Type C for "momentary" switches. Will lock out or prevent depressing any two adjacent modules.

REAR COUPLING



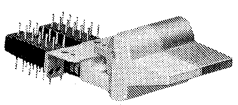
When desired, a coupling can be provided that will permit the switch to perform additional functions. This consists of an adapter ring which is attached to the rear end of the slider bar and may be used to provide an alternate source of activation.

CLEARING MODULES

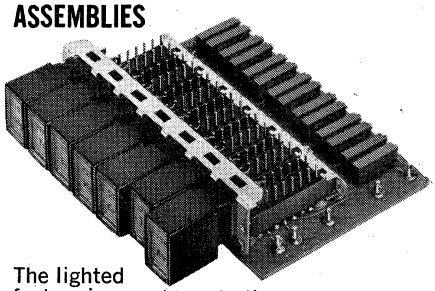


A clearing module can be provided for releasing an engaged switch when interlocking switching is used. This module has no contacts but it provides a mechanical means of activating the interlocking mechanism. It is available with either momentary or interlocking action.

KEY SWITCH

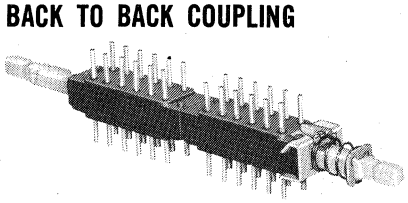


LIGHTED ASSEMBLIES



The lighted feature is an add-on to the basic module. All standard specifications and functions of the non-lighted switch apply. Detailed light assembly specs and features are available at your Centralab distributor and factory. **Ask for latest catalog.**

BACK TO BACK COUPLING



When desired, two modules may be connected back-to-back, to permit a maximum of sixteen poles to be operated by a single button. This is accomplished by connecting the slider bars with a slide bar coupler.

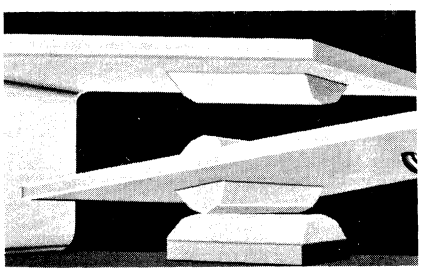
Cherry Gold "Crosspoint" Contact switches are available in a wide variety of switch types and mountings as shown above. These provide extremely low insertion resistance and long life . . . measured in millions of operations. The contact material is W/E Alloy #1 . . . 69% Gold, 25% Silver, 6% Platinum.



For positive switching of low energy solid state circuits.

The Cherry "Crosspoint" contact configuration . . . (two gold contact prisms at right angles to each other) provide maximum contact pressure and minimum hazard of contact closure interference.

KEYBOARD SWITCHES

for modern electronic desk top calculators . . . computer terminals . . . credit card validators. NEW Gold "Crosspoint" contact key.

This proven design concept (crossed knife edge contact configuration) provides high force per unit of contact area, and virtually eliminates contact closure interference by contaminates. Contacts are normally held apart for greater shock resistance. No microphonics or bounce during turn-off or at rest.

leaf and snap switches

leaf switches

Chicago Switch custom designed leaf switches provide for low-cost, long life switching in phonographs, hi-fi's, radios, tv's, computers, business machines, electronic organs, vending machines, and appliances. Following are just a few "standards" that are available. We would be pleased to custom-design standard switches to fit your application — without costly retooling or special designing. Because of our engineering, production and design facilities — and the versatility of our tooling — you can get the exact leaf switch to meet your requirements.

Actuation can be furnished in cam, roller, push button, rotor actuated — or any mechanical situation you require.

Contacts and lifters can be located on your switch anywhere along the blade length with increments of .001 of an inch, if necessary.

Contacts can be made of palladium, gold, silver, silver cadmium 90-10, silver-plated — whatever material will do the best job.

Blade profile — Most industry standards and many specials are available from stock. Any profile can be made to your specifications. Blade material can be any of either the standard or exotic materials.

No matter what your requirements — Chicago Switch has the experience and facilities to produce leaf switches for you on both large and small orders — switches that are guaranteed to perform and produce to blueprint.

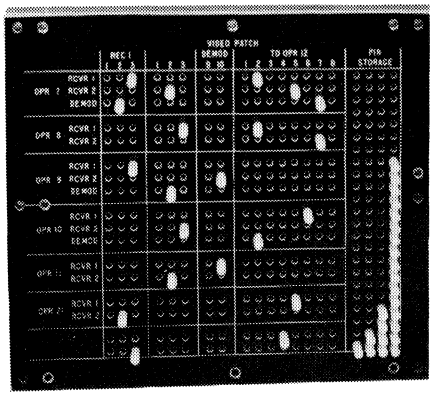
MATRIX PROGRAM BOARDS



CO-ORD Matrix Program Boards are composed of 2 to 8 decks of contacts that are bussed on .250 centers. The contact rows of one deck are usually oriented perpendicular to the rows of adjacent deck(s) so as to obtain switching crosspoints. Electrical connections of the bussed contact rows are effected by inserting shorting pins at the desired crosspoints; "CO-AX", phone plug type pins are available for networks which require component insertion (Diodes, resistors, etc.). Single board matrices of up to 11,000 crosspoints are available in standard or special arrangements. Bussed and isolated contacts can be had alone or in combination. Panels may be screened, engraved, or fitted with pre-punched templates for rapid program changing.

These Matrix Program Boards are designed to meet the increased technological requirements for miniaturization in electronic systems and equipment. They have all the same features of the larger matrices and can be supplied in from 2 to 4 decks of bussed contacts. Single matrix boards of up to 2500 crosspoints can be furnished in one solid unit, with rugged Shorting and CO-AX (diode) pins available for programming functions. A standard 2 deck matrix measures .315 inches thick from the front to rear panel; program pins are .280 inches long by .063 inches in diameter. Termination of the bussed contacts are to .040 diameter pin terminals, which allow the matrix to be plugged into mating female receptacles or connected to directly by wave, dip, or hard soldering. Contact resistance is only .005 ohms per crosspoint; breakdown voltage 600 VRMS; current capacity 3 amps continuous.

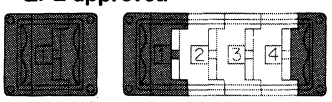
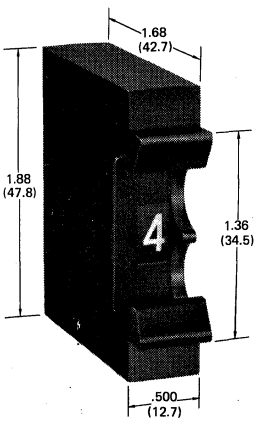
- Series 300, 13000 & 9000 QPL approved



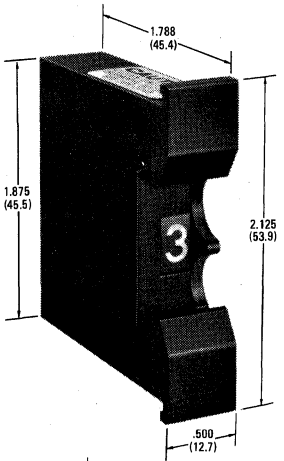
Modular Construction



Series 300
8, 10, 12 & 16 DIAL POSITIONS

This one module shown is our standard, general purpose unit. When grouped together with end flanges, the assembly is installed through a cut-out from the rear of the panel. Simple mounting screws are required. Note that the DIGISWITCH, which is the largest of all our switches, can be supplied with up to 16 dial positions.

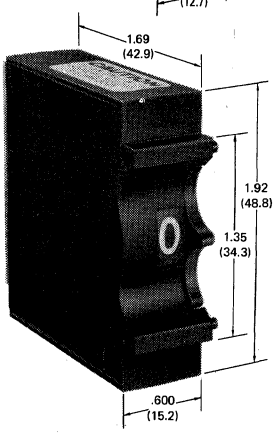
The Series 300 is QPL approved to MIL-S-22710/11.



Series 13000
FRONT PANEL MOUNT 8, 10, 12 & 16 DIAL POSITIONS

This series is identical to the Series 300, except that the case is designed to allow mounting from the front of the panel. Four mounting screws required.

The Series 13000 is QPL approved to MIL-S-22710/14.



Series 9000 & 19000
SEALED & DUST PROOF 8, 10, 12 & 16 DIAL POSITIONS

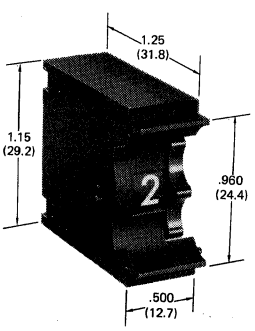
The Series 9000 is completely sealed. Excellent for use on machines or equipment that are exposed to heavy concentrations of liquids such as oils or water. Further on, you will see that our MINISWITCH also comes in a sealed version. Consider this, however, if your application requires the operator to wear heavy protective gloves, this larger (.6" wide) switch might be more practical.

The Series 9000 is QPL approved to MIL-S-22710C/12.

Series 19000 is unsealed, but is considered "dust proof".

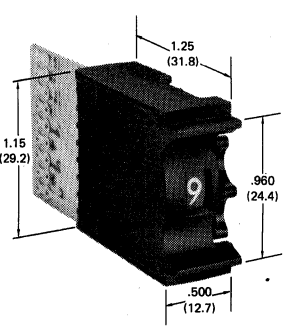
MINISWITCH®

- Hundreds of codes available
- P/C board terminations
- .025" sq.wire wrap posts
- Wire bundle terminations
- Replaceable dial lighting
- Special dial markings
- Miniature
- Series 200 & 700 QPL approved



Series 8000
8, 10 & 16 DIAL POSITIONS

This switch is a miniaturized version of the Series 300 DIGISWITCH. It is mounted from the rear of the panel with four mounting screws and, like the DIGISWITCH, can be grouped with end mounting flanges into as many switching units in a row as desired. Like most of our thumbwheel switches, the MINISWITCH will give you over 1,000,000 reliable detent operations.

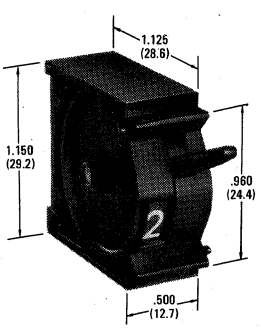


Series 200 & 700
SEALED 8, 10 & 12 DIAL POSITIONS

The Series 200 has potted wire lead terminations, and the Series 700 has a P/C board extending from the rear of the switch. Both are completely sealed. The 700 Series can be furnished unsealed but with the dust proof feature for commercial or non-critical applications. Note that both are physically identical, and therefore may be mixed in one complete assembly with end mounting flanges.

Series 200 is QPL approved to MIL-S-22710C/15.

Series 700 is QPL approved to MIL-S-22710C/20.



Series 28000
MINILEVER 10 & 12 DIAL POSITIONS

Each module is actuated by a geared type lever. By moving the lever in either direction, you can instantly position the digits from zero (0) to ten (10), or zero (0) to twelve (12). For instance, they have been used on credit checking machines. The operator can set up the customers' credit card number rapidly, then push a button and check the customers' credit. He can then instantly reset all digits back to zero with one sweep of the hand.

ECONOMY MINISWITCH

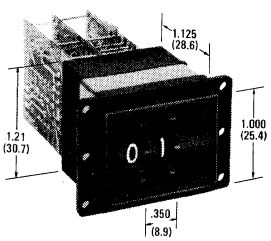
Series 29000

Here is our new little money saver. Although slightly derated electrically from our Series 8000 MINISWITCH, certain mechanical and material changes have reduced the selling price considerably without reducing quality. If you have an application where the ultimate in low cost is mandatory, this is the switch. This switch is also sealed against normal exposure to dust and other dry contaminants.

Series B29

PURE BINARY 10 DIAL POSITIONS

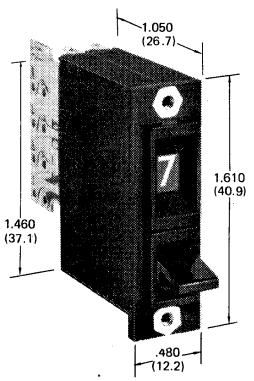
Using the basic Series 29000 construction, this switch has been developed for systems which must convert binary-coded decimal input to pure binary output. It automatically converts any decimal from from 0 to 999,999 to its binary equivalent. Compatible with both TTL and DTL circuitry, the Series B29 is available with either positive or negative logic output. Mechanical operation, mounting, etc., is the same as the Series 29000.



Series 24000

SEALED, BI-DIRECTIONAL SWITCH 10 DIAL POSITIONS

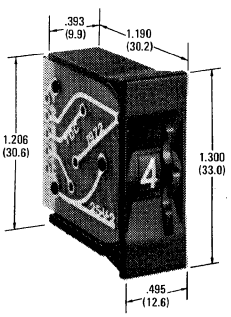
This little toggle or paddle handle switch mounts in a panel cut-out with two screws. You can mount a row of them in one large cut-out, or mount them in a series of individual cut-outs. By actuating the toggle in either direction, the digits click in view, in sequence. And, you will like the short arc between each position. It's faster than ordinary toggle and thumbwheel switches. The front face is completely sealed so that with a mounting gasket, your equipment will be properly protected against contamination.



Series 25000

"SNAP-IN" UNIT 10 DIAL POSITIONS

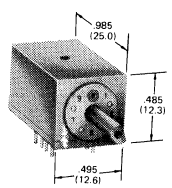
Here's a unit that simply snaps into a panel cut-out. No mounting screws are required. They do not assemble together with end flanges like most of our other standard switches, but are mounted side-by-side in one large cut-out, or snapped into individual cut-outs. They also snap-in from the front of the panel too, which makes assembly very simple and very attractive. This is a very economical unit that costs even less to install.

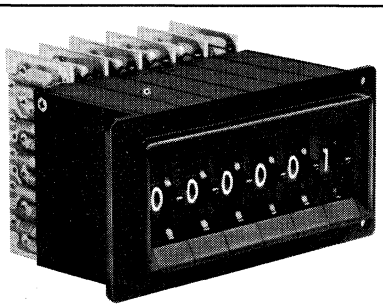


Series 26000

"DIGIDIP" 10 DETENT POSITIONS

The DIGIDIP is a tiny switch that can be plugged into a dual inline IC socket, or dip soldered to a printed circuit board. You can order them as BCD with one common and single pole/decimal as standard. Other special outputs are available on request.





DIGIVIDER/DIGIDECADE

DIGIVIDER is a thumbwheel switch that has been converted into a voltage divider. When you dial the voltage setting you desire, that's precisely what you get as an output. You can also order a model that provides high resolution trimming in the least significant digit.

DIGIDECADE is also a thumbwheel switch, only it has been converted to a resistance decade. You dial the output resistance you want and that's precisely what you get.

HOW TO ORDER:

Part number is stylized to select desired switch and cap. Switches and button caps can be ordered separately or as an assembly.

For Switches Select —
- Style of Mounting.
- Circuitry and Characteristics.

For Button Caps Select —
- Proper or desired Button Cap Shape.
- Keyed or non-keyed Caps (Keyed preferable on legended buttons to ensure proper alignment).
- Button Cap Color and Top Cap Color — Button can be made in one color or in two colors, such that the lower half of the button is one color and the top half is another. When assembled, the lower color forms a color ring. This color ring disappears in the down position. This effect is particularly useful with alternate action switches as an indication of switch position.

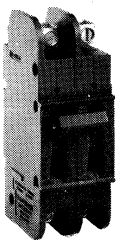
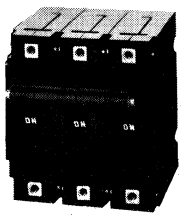
HYDRAULIC-MAGNETIC CIRCUIT BREAKERS

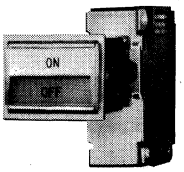


E-FRAME

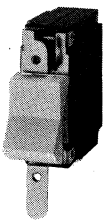


SERIES AM1

SERIES JA



SERIES JL



SERIES JC

Heinemann breakers offer almost unlimited options: integral or fractional ratings from 10 milliamp to 100 amp, and in steps to 225 amp; single and multipole models; breakers for 60 or 400 Hz AC, or DC service; breakers that meet Mil Specs; and models with special internal circuits like relay-trip and calibrating-tap for control functions. Hydraulic-magnetic actuation assures that ratings and trip points are unaffected by ambient temperature changes. A wide selection of time-delay characteristics permits close match of breaker to equipment requirements. Request the Heinemann Engineering Guide (Bulletin 202), or the Condensed Guide (303), or contact your Heinemann representative. Individual product bulletins listed below.

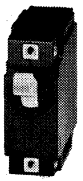
E-FRAME: Smaller than other E-Frame breakers, competitively priced. Approx. 5¾h x 2w x 2⅜d (2-pole). Available in 1 to 6 poles.

SERIES AM1: 1, 2, 3 poles. UL-component-recognized. Special circuits available. Approx. 2.5h x 2.5d, .75w per pole.

SERIES JA: Compact OEM breaker. Only 2.5 oz/pole. 1, 2, or 3 pole. Approx. 2h x 1.875d, .75w per pole.

JA VARIANTS. Snap-In JB (1 to 3 poles) installs in rectangular panel cutout without screws. JC (1 to 3 poles—single-pole shown) has white or gray rocker handle. JD has round button for push-push operation. JE has moisture-sealed bat-type toggle for marine applications. Square pushbutton of JL (shown) lights in both "on" and "off" modes.

CROWBAR IN A CIRCUIT-BREAKER PACKAGE



SERIES JA/Q

The newest **Heinemann JA/Q Electronics Protector** is nearly all-encompassing in its ability to prevent damage to solid-state components. In one standard Series JA package it provides:

- transient/overvoltage crowbar protection, response time 500 nanoseconds;
- electromechanical equipment disconnect (protection for the crowbar) in 10 milliseconds;
- normal overcurrent protection

A thick-film hybrid SCR crowbar microcircuit is packaged into the rear of a Series JA hydraulic-magnetic circuit breaker. A transient or overvoltage on the AC or DC supply line will cause the SCR to fire, placing a dead short across the load to common. The short opens the breaker, removing the equipment from the line. Current ratings 0.020 to 10 A (DC), firing voltages 4.5 to 50 V (DC). Dimensions 2h x .75w x 1.8d. Bulletin 3371.

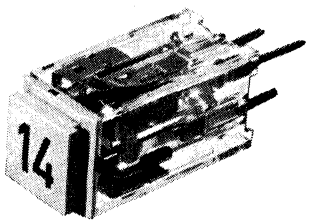
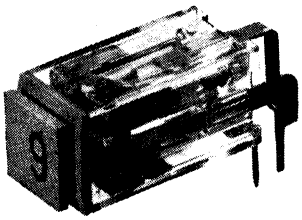
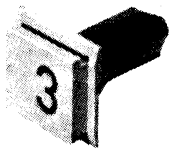
DATA MODULES AND MATRIX BOARDS

DATA MODULES







Small input device compared to thumbwheel switches or matrix boards that make it a very versatile device for test equipment, machine tool controls and other programming applications. Inexpensive and miniature coding device uses binary coding techniques. Data module consists of four miniature contact switches, four silicon diodes and a plastic housing. The programming keys actuate the switches when inserted in the data module body. Keys with numerals 0 to 15 are available; i.e., a #3 key closes the 1 and 2 lines, a #14 key closes the 2, 4 and 8 lines. Numerical characters are standard in 7mm (.276″) height to offer a large numeric readout in the smallest possible area. Each switch has four output terminals and common. Data programming module is a lowest-common denominator panel element for data entry. Wiping action set up during key insertion ensures contact reliability. For quick, error-free programming of many characters at once, flexible-plastic program-storing templates enable a complete set of keys to be inserted or removed simultaneously. Switch body is available with or without four internally mounted 1N4148 silicon diodes. Data modules are designed to mount on a printed circuit board and protrude through a rectangular cutout in the front panel. **Working Current:** 1 amp max. **Working Voltage:** 50 VAC/DC max. **Contact Resistance:** 50 milliohms. **Temperature Rating:** −20° to +70° C. **Operating Life:** 10,000 switching cycles min. **Keys:** Molded plastic with black numerals. Other colors and inscriptions also available on special order. **Codes:** 8-4-2-1; Excess 3; Aiken 2-4-2-1 or virtually any 4-bit binary code. **Body Size:** 12mm (0.469″) square x 22mm (.844″) (not including terminals).

MATRIX PROGRAM BOARDS

Most advanced, reliable and convenient device that is fundamental to the programming of thousands of different kinds of instruments, computers, machines and control systems. Important application advantages are design simplicity, programming ease and flexibility, high area and volumetric density, visual presentation of circuit linkages. Standard matrix boards are an array of X and Y coordinates that locate circuit intersections. The horizontal contact bars, "rows", are mounted directly behind the panel and are identified by letters; the vertical contact bars, "columns", are mounted beneath the horizontal bars and are identified by numbers. Each contact bar has a solder terminal at the rear of the matrix. Board features gold plated beryllium contact strips, gold-plated terminals and an imprinted panel. The front panel is a laminated board, composed of multiple layers of paper and phenolic resin. The top layer, covering the imprinted paper foil, is a transparent melamine resin. **Current Rating (per contact bar):** 10 amps for 6mm spacing; 5 amps for 3mm or 4.5mm spacing. **Working Voltage:** 220 VAC/DC max. **Contact Resistance:** 7 milliohms with short circuit pins. **Terminals:** Solder lug.

PROGRAMMING PINS

Standard elements for use with matrix program boards. **Shorting Pins:** For direct connection between horizontal and vertical contact bars. Stocked in black and red colored handles. Also available with shorter handles in brown, yellow, green, blue, gray or white colors on special order. **Diode Pins:** Have a 1N4148 fast switching silicon diode to control current direction and prevent sneak paths between rows and columns when inserted in any hole. Stocked in black and red colored handles with the diodes soldered anode-to-tip making the polarity from column (+) to row (−). Diode pins having opposite current direction, other color handles (specified above) or different diodes also available on special order. CUSTOM ACCESSORIES: **Dummy Plugs:** Insulated plugs used to connect forbidden intersections. **Plug-In-Lamps:** Available in 6mm spacing only. Connect 12-volt lamp between line and column when inserted in any hole. Available in red, green and white colors and indicate which equipment or circuit is on, even from a distance. **Cable Plugs:** One sided or two sided; convert the matrix board into a diagnostic center by converting each hole into a test point, permitting connection of that intersection to external trouble-shooting equipment from the front of panel. **Dual and Triple-Segment Shorting Pins. Programming Templates.**

J-B-T 34th Year

In the J-B-T line of switches are: 1-, 2-, 3-, and 4-pole toggles—rockers and paddle levers—12-, 14-, and 20-position rotary and lever switches—sub-miniature and standard sizes—sealed and not sealed—general purpose and military—with various finishes, configurations and constructions, standard and special. It's a broad line of instrument type switches built in Connecticut to high quality standards.

SUB-MINIATURE TOGGLE, ROCKER AND PADDLE LEVER SWITCHES . . .

. . . Combine drastic reduction in size and weight with trouble-free performance of J-B-T standard size general purpose toggle switches. Distinctive green bodies are only ¼" x ½" for single pole models; 2-, 3-, and 4-pole models are proportionately small. Nominal rating is 5 amp/125 VAC for the series with coin silver switching parts; 0.5 watt, 28 VAC or VDC for series with gold plated brass parts. High torque bushings are standard. Most popular models are UL listed. Choice of lever types, including push-button, rocker and paddle lever types, bushing sizes, terminals, circuit configurations, and finishes. *Catalog MT-40E*

SUB-MINIATURE 12-POSITION ROTARY AND LEVER SWITCHES . . .

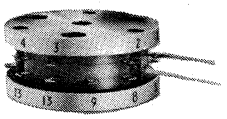
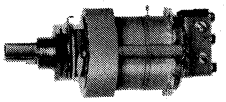
TYPICAL UNIQUE APPLICATIONS OF JANCO ROTARY SWITCHES



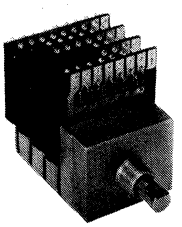
WITHSTANDS HIGH RANDOM VIBRATION LEVELS

This rotary switch is capable of successfully withstanding random vibration characteristics of 10 to 3,000 Hz in excess of 100 G's. Meets shock requirements of 384 G's of sawtooth shock pulses.



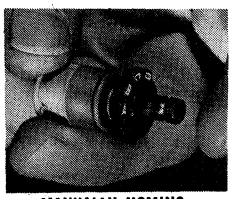
MINIATURE POWER SWITCH CUTS COSTS BY 50%

Janco's line of miniature rotary switches is available with an auxiliary snap action switch affixed to the back. Coupled with an isolated positions feature, it enables the user to switch 10 amps with no danger to the switch. Cost reduction is approximately 50% over conventional power switches.



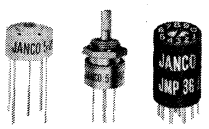
MORE SWITCHING IN LESS SPACE

Circuit board construction is featured in this switch. Offers the same switching capabilities normally associated with switches having 2 to 3 times more decks. Also features isolated positions and custom codes.



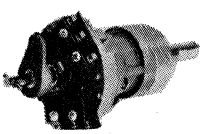
MANUALLY HOMING ROTARY SWITCH

Features instant release button, which automatically returns to predetermined designated home position. Has four positions with visual indicator. Variations available.



MINIATURE PIN-TYPE ROTARY SWITCHES

Designed for printed circuit boards and front panel mounting. Available in various numbers of positions and poles.



FEATURES UNIQUE ON-OFF OPERATION

Actuated by pulling knob out of "off" position and rotating to "on" positions. While in "on" positions, circuitry cannot be shut off until knob is returned to "off" position and depressed. Number of positions optional.

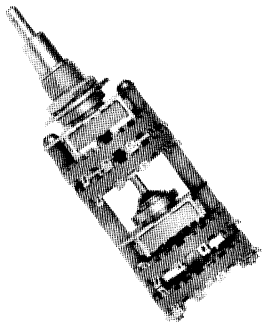
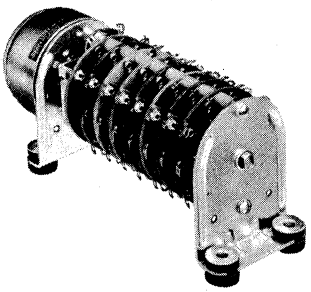
STEPPING SWITCHES/CIRCUIT SELECTORS



Versatility, Economy, and Reliability are the main benefits offered by Ledex manual rotary switches. Sizes range from ½" diameter multi-deck designs to 24-position switches measuring 2¼" in diameter. For your more complex requirements, switches are available with concentric shafts or as complete switching packages. To simplify wiring and reduce your assembly costs, you can specify designs to include pre-wired components, wiring harnesses, or PC terminals.



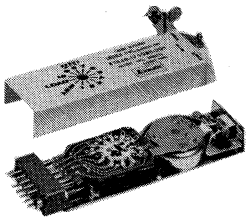
30 Off-The-Shelf Models
Ledex Stepping Switches are used for transfer switching, remote control of predetermined circuit patterns, remote sequencing of complex switching arrangements, or in programming checkout and sequential operations. They are known best for their ability to perform multiple switching functions reliably, in limited space, and under severe operating and environmental conditions. Available in open construction, pre-wired modules or as packaged control solutions.

Ledex Hermetically Sealed Switches are engineered to withstand severe shock and vibration, such as encountered in aircraft, missile and military applications, and to provide added switching reliability in adverse environments. Used extensively in aero/space and underwater guidance controls, as mode selectors, in rocket firing devices, and in a variety of military control functions that demand a high degree of reliability. There are 19 models available from the shelf.

PACKAGED CONTROL SOLUTIONS

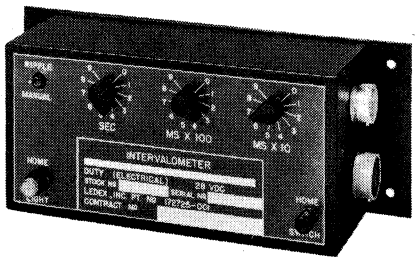
Here are examples of Ledex Stepping Switches designed into compact, reliable control packages that combine the best characteristics of solid state and electromechanical technologies.

Whether your problem involves armament controls or commercial control functions, there's a good chance Ledex has already solved a similar problem. Our Packaged Switches Catalog, B-3252, shows several more detailed examples and also includes specifications for 19 hermetically sealed switches available from the shelf.



Miniaturized Armament Control Intervalometer
Flat, compact, 12-position stepping switch measures only ½" x 1¼" x 4¼", fires 19 rockets, sequentially in pairs. It includes a Ledex pulser to control time intervals over mil-spec. temperature and voltage ranges.

40-position Intervalometer with single or optional 5-speed ripple fire control
40-position intervalometer has 5 adjustable control speeds for rocket firing at intervals of 100, 200, 300, 400 or 500 milliseconds. Hybrid design combines best characteristics of solid state and electromechanical products for optimum performance, minimum weight, maximum reliability and lowest cost. Firing time intervals are maintained at ±5% through a voltage range of 22 to 31 vdc.



Universal Stores Dispenser Intervals Variable on Digital Basis

All solid state and among the most flexible of Ledex intervalometer designs, this one permits the pilot to vary release intervals to any rate ranging from 30 ms to 9.99 seconds in increments of 10 ms. It includes a stepping switch to distribute sequential fire commands. Timing tolerance is ±10% over a voltage range of 22 to 32 volts and temperature to −55°C to +85°C. The package includes built-in suppression to protect solid state circuitry when switching inductive loads.

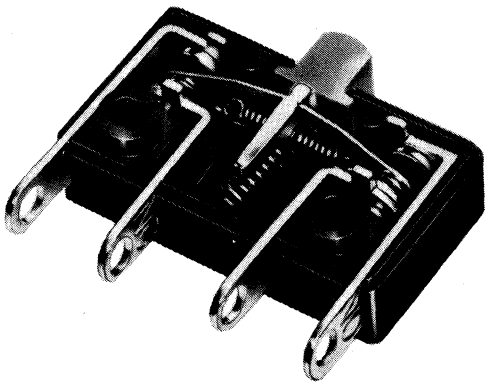
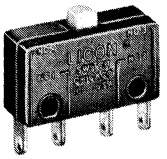
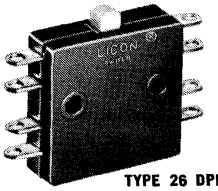
LICON General Information BASIC SWITCH

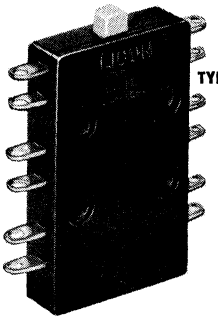




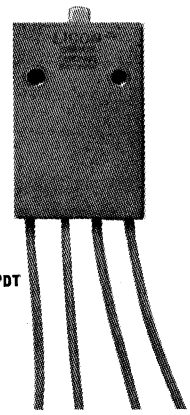
TYPE 16 SPDT



TYPE 26 DPDT



TYPE 36 3PDT



TYPE 16 IWTS-SPDT

The heart of a lighted pushbutton switch is the basic switch. All Licon® lighted switches employ patented Butterfly® double-break basic switches offering unequaled capability in contact rating, circuitry, performance, and terminal options.

The exclusive Butterfly® double-break switch mechanism consists of a twin blade and spring design which simultaneously makes or breaks a circuit at two points. Double-break action distributes arc heat over twice as many contact surfaces and air gaps as conventional single break switches, resulting in a higher contact rating for a given package size. The A-frame design of the Butterfly® mechanism provides substantial contact wiping action during operation which serves to clean contact surfaces (important in low level applications) and shear minor contact welds (important in power applications). The spring loaded mechanism provides rapid transfer time, positive tactile feel, minimized contact bounce, and excellent resistance to shock and vibration. When compared to stressed blade single break switches, Butterfly® double-break basics offer increased mechanical and electrical life because operating stress is absorbed by the coil springs.

Double break basic switches are available in subminiature single pole (Type 16) double pole (Type 26) and triple pole (Type 36) versions, allowing lighted switch circuitry ranging from one to six poles with minimum behind panel space required. Each pole of a double break switch mechanism has an isolated two circuit handling capacity, for added circuit flexibility.

Double-break basics are available with a variety of case and contact materials, and a complete selection of terminal styles, including Integrated Wire Termination Systems (I.W.T.S.) The subminiature double-break basic switches are also offered in military approved versions, under MIL-S-8805. Electrical ratings and physical dimensions are shown on this page.

LICON Switches

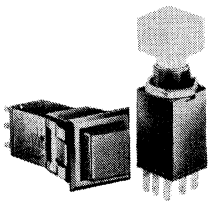
TYPE 03 — THE CONVERTIBLE III LIGHTED PUSHBUTTON SWITCH



Licon's 03 series lighted pushbutton switches offer both momentary and alternate action in one switch. Mode choice is made by sliding a selector tab located between the terminals.

In momentary action, depressing the lens cap actuates the switch. When the cap is released, switch resets immediately and the cap returns to its rest position. Alternate action requires a press to actuate and a second press to release. Either action in the same compact size.

This low-cost switch features thermoplastic housing and accepts T1¾ base lamps. Lamps are easily replaced by pulling out lens cap, inserting new lamp, and snapping cap back on.

Small in size (2⅛ x ⅝ inch square), the switch's symmetry makes it ideal for matrix mounting and PC board applications. Available with standard .110 in. Faston quick connect terminals.

Switch can be panel mounted from either rear or front with bezel or bezel barrier time saving snap in mounting.

HIGH VOLTAGE FUSES

Designed for use in aircraft radio equipment, transmitting equipment, X-ray apparatus, high voltage rectifiers, etc. For use in circuits rated up to 20 kW DC or 30 kVA AC. Fuses are fiber enclosed with cadmium plated end caps; 612000–623000 caps are nickel plated. Two principles of arc suppression are employed: (1) Multi-break fuse wire which blows at each half inch of its length; (2) Ceramic baffles break the arc into several parts and quench it.
Blow Time: 110%, 4-hour min.; 135%, 1 hour max.; 200%, 10 sec. max.

Magic Dot™

innovative, high-reliability switching technology

Magic Dot solid-state lifetime switches utilize integrated circuits and hybrid technology to provide a practical 'touch operated' switch with a TOTAL ABSENCE OF MOVING PARTS. Series 200 switches are currently available in momentary, latching and touch-on/touch-off (toggle) configurations with and without LED visual indication, in both standard and customer-specific designs.

These 'person sensors' offer unique design and operational advantages not available with even the finest electromechanical switches.

Magic Dot switches function on a truly modern concept that permits the touch of an operator's finger to trigger an NPN transistor and effect switching. Electrical and physical advantages are unparalleled.

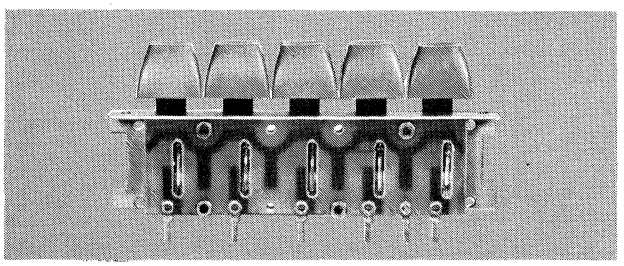
Maxi-SWITCH KEYSTRIPS AND KEYBOARDS

The Maxi-Switch Company is a leading producer of pushbutton switch components and switch assemblies for the computer, photo-copy, business machine, automation and peripheral equipment industries.

The Maxi-Switch Keystrip construction technique facilitates the design and production of custom keyboards. Individual push-button stations may be purchased singly, in Keystrips, numeric blocks, or as completed Keyboards, with or without encoding circuitry. The wide range of features, options and accessories complement Keyboard adaptability. (Maxi-Switch Bulletin 1600/1800.)

1600 & 1800 KEYSTRIPS



1800 KEYSTRIP

Maxi-Switch Keystrips present an unique approach to switch construction. These modular units offer long mechanical life and high quality in readily available, off-the-shelf assemblies. Combinations of different contact types, contact forms and plunger actions may be used within a single Keystrip. Up to 20 or more stations may be accommodated per Keystrip with standard spacing of ⅝ or ¾ inch between stations. Other spacings are optionally available.

Standard Series 1600 and Series 1800 switches are equipped with glass reed contacts, and differ only in frame height and available options (1600 — 1.5″ high, 1800 — 1.1″ high). Contact options (1600 only) include cross-bar palladium leaf contacts and 15 ampere snap-action power contacts. Reset and lockout solenoids may also be used with Series 1600 Keystrips.

Individual reeds may be tied to a common bus on one side, or brought out to seperate terminals, depending on the requirements of the application. The common bus feature saves component and mother-board space, and requires fewer solder connections.

KEYBOARDS

KEYBOARD ASSEMBLY

Maxi-Switch offers three different keyboard construction methods.

Keyboards can be constructed using Keystrips mounted on a precision-fabricated steel frame. Spacing is precise, with no possibility of cocked or twisted buttons, or switch misalignment. Keyboard orientation may be flat, stepped or sloped.

Keyboards also are available constructed from our new 2700 Series Reed Switch and 3100 Mechanical Switch modules. Series 2700 switches feature pre-tested reeds that are machine adjusted for consistent operation. Series 3100 mechanical switches feature simplicity and long life in a low cost switch that incorporates contact wiping action as the switch is operated.

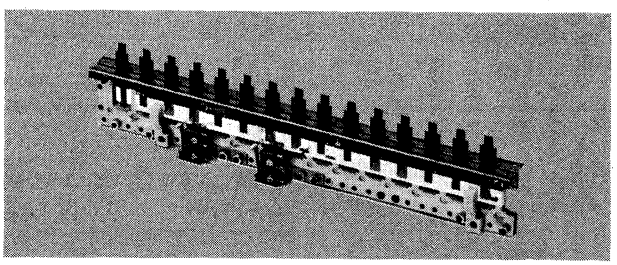
Maxi-Switch encoded keyboards may be ordered with either USASCII or EBCDIC standard formats. Encoding may be modified to meet special customer requirements. Output is compatible with DTL/TTL or MOS logic circuits, and is transmitted in up to 9 bits.

1200/1400 KEYSTRIPS

Series 1200 and 1400 Keystrips feature two-piece steel frames as the basic structure, with push-button components mounted between two frame halves. Precision tooling and the highest quality materials are used in Maxi-Switch construction for long life and trouble-free operation. Careful attention to tolerances gives smooth action with low operating force. These Keystrips may be supplied as completed individual keystrips, assemblies of several keystrips, or in custom panel assemblies, wired and tested.

Series 1200 and 1400 Keystrips may be lighted with one or two lamps per switch station (form A lamp contact not available on 1400 switches with more than 3 bits). Both midget groove and midget flange T-1¾ bulbs are available. Lamp sockets may be furnished with solder lugs, AMP 78 Series taper tabs, 3-inch pigtail lead wires, or with common bussing.

1400 BINARY KEYSTRIPS



1400 KEYSTRIP

Maxi-Switch offers the newest concept in binary coded decimal switching. Series 1400 switches represent a significant advancement in the development of simplified mechanical encoding techniques, eliminating the maze of contacts, diodes, and interconnections normally associated with switch encoding. Wiring, bussing and solder connections are reduced to a minimum, with appearance and reliability enhanced by simplified construction. Up to 20 buttons can be accommodated on a single 1400 Keystrip.

BCD encoding is accomplished by means of movable bit bars fitted with snap-in acetyl resin coding cams. These cams cause the bit bars to close the proper contacts for a discrete code when a button is depressed. Coding may be modified in the field or by the customer simply by repositioning the bit cams.

The Maxi Binary Switch will provide 3, 4, 5 or 6-bit binary output through snap-action contacts rated at 3 amperes, 300 watts, form "A" (SPST/NO) or form "C" (SPDT).

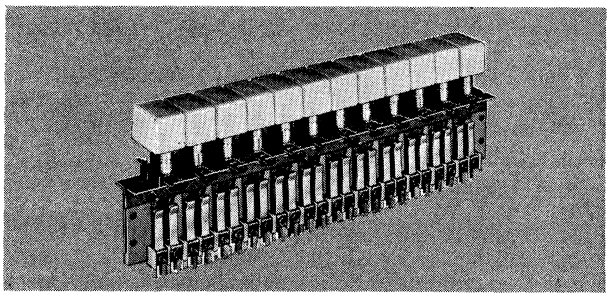
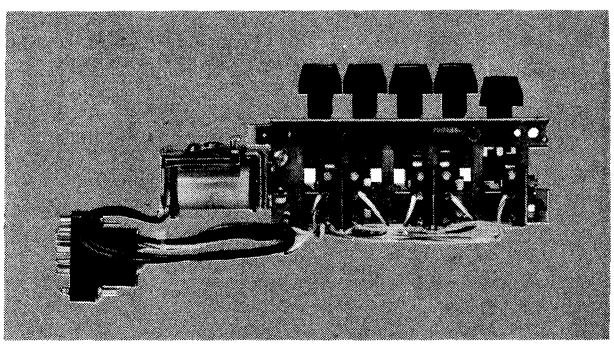
1200 KEYSTRIPS



1200 KEYSTRIP



1200 KEYSTRIP

Series 1200 Keystrips provide circuit switching of up to 20 positions per keystrip. Many action options are available, and variations of standard design may be quickly accomplished using basic shelf stock for fast prototype and production service. Maxi Keystrip construction is strong and durable. The heavy duty frame members eliminate problems of cocked or twisted buttons and imperfect spacing. Our Keystrips add a touch of lasting quality to the appearance of any equipment.

The range of available contact forms (A, AA, B, C or F), plunger actions, terminals and buttons allow the designer to specify switches which are exactly suited to the application. With Maxi-Switch there need be no compromise with quality or capability.
